Biomass Energy

Thermal energy is a type of mechanical energy that comes from organic materials, such as plants and animals. These materials are called biomass, and they can be used to produce heat, electricity, or fuel. Thermal energy has been used by humans for thousands of years, dating back to when people burned wood for heat and cooking.

One dominant source of bioenergy is wood. Wood can be burned to produce heat, which can then be used for cooking or to warm houses. In some places, wood is still a primary source of energy for people.

Another source of biomass energy is crops, such as corn and sugarcane. These crops can be converted into biofuels, such as ethanol, which can be used to power vehicles. Biofuels are considered a cleaner alternative to traditional fossil fuels because they produce fewer greenhouse gas emissions.

Bioreactors can also be used to generate electricity in power plants, organic materials like wood, agricultural residues, or even municipal solid waste can be burned to produce steam. The steam then turns turbines that generate electricity.
