Chemical Engineering contain ten prototypical paradigms which integrate ideas and methodologies from artificial
intelligence with those from operations research estimation and control theory and statistics Each paradigm has been
constructed around an engineering problem e g product design process design process operations monitoring planning
scheduling or control Along with the engineering problem each paradigm advances a specific methodological theme from AI
such as modeling languages automation in design symbolic and quantitative reasoning inductive and deductive reasoning
searching spaces of discrete solutions non monotonic reasoning analogical learning empirical learning through neural
networks reasoning in time and logic in numerical computing Together the ten paradigms of the two volumes indicate how
computers can expand the scope type and amount of knowledge that can be articulated and used in solving a broad range of
engineering problems Sets the foundations for the development of computer aided tools for solving a number of distinct
engineering problems Exposes the reader to a variety of AI techniques in automatic modeling searching reasoning and
learning The product of ten years experience in integrating AI into process engineering Offers expanded and realistic
formulations of real world problems **Proceedings of the ASCE Environmental Engineering Division Specialty**
