

Resultant Force

Determine the magnitude of the resultant force and its direction measured clockwise from the positive x axis.

$$F_R = \sqrt{(2 \text{ kN})^2 + (6 \text{ kN})^2 - 2(2 \text{ kN})(6 \text{ kN}) \cos 105^\circ}$$
$$= 6.798 \text{ kN} = \underline{6.80 \text{ kN}}$$

$$\frac{\sin \phi}{6 \text{ kN}} = \frac{\sin 105^\circ}{6.798 \text{ kN}}, \quad \phi = 58.49^\circ$$

Handbook Washington (State). Department of Ecology,1994 Engineering Elasticity Humphrey Hardy,2022-11-10 This textbook aimed at upper level undergraduate and graduate engineering students who need to describe the large deformation of elastic materials like soft plastics rubber and biological materials The classical approaches to finite deformations of elastic materials describe a dozen or more measures of stress and strain These classical approaches require an in depth knowledge of tensor analysis and provide little instruction as to how to relate the derived equations to the materials to be described This text by contrast introduces only one strain measure and one stress measure No tensor analysis is required The theory is applied by showing how to measure material properties and to perform computer simulations for both isotropic and anisotropic materials The theory can be covered in one chapter for students familiar with Euler Lagrange techniques but is also introduced more slowly in several chapters for students not familiar with these techniques The connection to linear elasticity is provided along with a comparison of this approach to classical elasticity Fundamentals of the Optics of Materials Vladimir I. Gavrilenko,Volodymyr S. Ovechko,2023-10-19 This textbook showcases the rapidly developing field of materials optics It is aimed at a broad audience as the readers require only university entry level knowledge of physics chemistry and optics It overviews the basics of optical engineering and the typical and widely used applications of materials optics with the first general chapters corresponding to the standard university courses targeting bachelor s and master s degrees in physics The next few chapters present the modern developments in materials optics such as nano plasmonics nano photonics and optical properties of nano sized materials intended for readers familiar with the basic elements of quantum mechanics Some more specialized chapters address recent developments in fields such as optics of solid surfaces plasma

optics optics of composites alloys and metamaterials optics of anisotropic materials optics of organic and biological materials and relativistic effects in optics The appendices present a more advanced description of selected topics with important reference materials subject index and extended list of publications as well as numerous examples and problems to better orient readers interested in gaining further knowledge of the subject Intermediate Solid Mechanics Marko V.
