**Berkeley Physics Course Volume II**  
**Preface to the Solutions Manual**

This manual of problem solutions is intended primarily as an aid to instructors teaching from the second volume of the Berkeley Physics Course. They will, I hope, find the manual a useful supplement to the text. The solutions for the less routine problems often include some explanation going beyond the bare requirements of the problem. The instructor would be well advised to peruse the solutions for the more ambitious problems before he assigns them—if only to be warned of traps which were not always foreseen when the problems were devised.

The solutions were checked by Thomas Knight, who found some errors and made many valuable suggestions for improvement and clarification. Many instructors who feel that the course in his class would be improved if he could that the author made some mistakes in working his own problems is surely bound to do so. Numerical errors may still turn up. Notice of such would be most welcome, as would any other suggestion for improvement of the material in the manual. Please address any suggestions to the undersigned at Lyman Laboratory, Harvard University, Cambridge, Mass. 02138.

Appropriate parts of this manual may be detached and printed, or with copyright notice displayed, may be reproduced in part or in whole for the private use of students. We do not, however, recommend that the entire manual be made available to students.
