Keeping The Lights On Towards Sustainable Electricity:

Keeping the Lights On Walt Patterson, 2012-05-16 This is such a timely book Combining extraordinary historical insight with the sharpest analysis of where we are now Walt Patterson carves out the most applied and practical of road maps as to where we need to go if we are to deliver a genuinely sustainable electricity system for the future As we go into a period of considerable turbulence primarily because of the impacts of climate change *Keeping The Lights On* will undoubtedly be seen as a very well informed Guidebook JONATHON PORRITT CBE CHAIR UK SUSTAINABLE DEVELOPMENT COMMISSION A very important and timely book Walt Patterson persuasively challenges traditional assumptions about how we think of energy and electricity and presents an exciting vision of an innovative and sustainable future NICK MABEY CHIEF EXECUTIVE E3G THIRD GENERATION ENVIRONMENTALISM FORMER SENIOR ADVISER IN THE UK PRIME MINISTERS STRATEGY UNIT Walt has got this exactly right It should be compulsive reading if not compulsory reading for all politicians and other players that determine or have a role to play in energy policy and more importantly in tackling climate change Knowing what we know now you would not implement such a wasteful and polluting electricity system as centralized power generation As Walt has indicated we do have to overcome the grid mindset of those who should know better ALLAN JONES MBE CHIEF EXECUTIVE OFFICER LONDON CLIMATE CHANGE AGENCY What can I say Clearly thought out simply written and straight to the heart of the major issues in energy today I cant think of anyone else who could bring together the technology the economics and the basic human relationship with energy that Walt has here This is really great stuff RONAN PALMER CHIEF ECONOMIST UK ENVIRONMENT AGENCY Fashions come and fashions go in the energy world Security of supply climate change and market liberalization have all vied for our attention Its good to have one voice thats stayed constant over thirty years of turbulence and change *Keeping The Lights On* distils Walt Pattersons thinking over the last three decades As ever he provokes us to re examine our own thinking about energy policy Essential reading as we face up to new challenges PROFESSOR JIM SKEA OBE RESEARCH DIRECTOR UK ENERGY RESEARCH CENTRE Even more important now than when first released *Energy News In Keeping The Lights On* Walt Patterson starts from a simple premise that we are making a mess of energy and this is endangering the planet Using accessible everyday language Patterson describes how we could do much better outlining a different way to think about energy what we want from it and how we get it Drawing on over 35 years of work from one of the leading voices in the field *Keeping The Lights On* explains how we could go about improving energy security and services while reducing costs and vulnerability globally and rapidly The book discusses the timely and heated debates surrounding energy and power and emphasizes that electricity is about infrastructure we have to stop treating it as a commodity The result is a comprehensive introduction to the most important issues providing the reader with innovative and expert ideas and solutions Published with Royal Institute of International Affairs *Keeping the Lights on* Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2006-04-16 By 2016 it is likely that between 15 and 20GW

of electricity generating plant will be decommissioned This amounts to nearly a quarter of total UK generating capacity Over the next 9 years substantial investment in new generating capacity and energy efficiency will be required if the lights are to stay on even in the absence of demand growth A further requirement is to move towards low carbon energy sources to reduce greenhouse gas emissions This report supports the view that new gas fired plant renewables and energy efficiency could make up for the potential generating gap and finds that an expansion of nuclear power could not be built in time and carries risks of major accidents or terrorist attacks All lower carbon generating technologies are more expensive than coal or gas and will require a long term funding framework to ensure the necessary investment takes place The Committee remains convinced that the 2003 White Paper emphasis on energy efficiency and renewables is still correct and finds the new energy review to be unclear in its purpose The Committee recommends that the Government shows far greater commitment and urgency in pursuing energy saving measures renewable sources and other technologies such as clean coal and carbon capture and storage

Keeping the Lights on Nils-Henrik M. von der Fehr,Jaime Millán,2003 Power sector reforms across Latin America in the 1990s based on privatization liberalization and market forces were largely unavoidable This book argues that while there is no turning back from this process many reforms may not prove sustainable without further efforts to build a stronger institutional platform to support them The analytical framework presented in Keeping the Lights On Power Sector Reform in Latin America establishes a baseline for the sustainability of reforms and identifies additional areas for exploration analysis and inquiry This analysis is critical to setting the stage for the next generation of reforms or mid course corrections that will be necessary to enhance the sustainability of changes in progress The book includes case studies of power sector reforms in Colombia Honduras and Guatemala as well as a timely section on the security of supply

The Dirty Energy Dilemma Benjamin K. Sovacool, 2008-10-30 The American electric utility system is quietly falling apart Once taken for granted the industry has become increasingly unstable fragmented unreliable insecure inefficient expensive and harmful to our environment and public health According to Sovacool the fix for this ugly array of problems lies not in nuclear power or clean coal but in renewable energy systems that produce few harmful byproducts relieve congestion on the transmission grid require less maintenance are not subject to price volatility and enhance the security of the national energy system from natural catastrophe terrorist attack and dependence on supply from hostile and unstable regions of the world Here arises The Dirty Energy Dilemma If renewable energy systems deliver such impressive benefits why are they languishing at the margins of the American energy portfolio And why does the United States lag so far behind Europe where conversion to renewable energy systems has already taken off in a big way Corporate media parrot industry PR that renewable technologies just aren't ready for prime time But Sovacool marshals extensive field research to show that the only barrier blocking the conversion of a significant proportion of the U S energy portfolio to renewables is not technological the technology is there but institutional Public utility commissioners utility managers system operators business owners and ordinary consumers are hobbled by organizational conservatism technical incompatibility legal inertia weak and inconsistent political incentives ill founded prejudices and apathy The author argues that significant conversion to technologically proven

clean energy systems can happen only if we adopt and implement a whole new set of policies that will target and dismantle the insidious social barriers that are presently blocking decisions that would so obviously benefit society **Are**
