Raymond, 2010-12-01 As the title suggests this six chapter book responds to a question which in Western culture goes back to Plato Aristotle Cicero and Quintilian namely What should rhetoric teachers ask their students to read Primarily historical the first two chapters trace conflicting answers to the question above focusing on two constructive results of the debate the re invention of rhetoric and writing as a discipline a coherent and growing body of knowledge and as a result the emergence of independent departments of writing free from departments of English free therefore to develop their own curriculum and to manage their own budgets Additionally the second chapter examines two destructive consequences of this debate the ban of literature from writing courses where students might profitably study both and as a result the often painful departmental splits which not only separate former colleagues but also cramp the pedagogy of those trained to teach both writing and literature More than a survey of key publications this chapter encourages readers to honor the discipline of rhetoric but to make a place for literature on their composition syllabi The next four chapters provide pedagogical support for these chief claims that literature can and should be taught in writing courses and that such readings need not distract students from the primary text their own writing On the contrary these readings motivate serious writing when students feel invited into a conversation on issues that touch their lives These pedagogical chapters then move entering professionals from the theoretical debate to the application of theory therefore the book would serve well professors of courses in composition theory particularly those who enjoy teaching the conflicts and preparing their graduate students to design assignments and courses that apply theories of learning reading and composing **Reconnecting Reading and Writing** Alice S. Horning, Elizabeth W. Kraemer, 2013-09-06 Reconnecting Reading and Writing explores the ways in which reading can and should have a strong role in the teaching of writing in college Reconnecting Reading and Writing draws on broad perspectives from history and international work to show how and why reading should be reunited with writing in college and high school classrooms It presents an overview of relevant research on reading and how it can best be used to support and enhance writing instruction Routledge Handbook of Descriptive Rhetorical Studies and World Languages Weixiao Wei, James Schnell, 2023-05-12 The Routledge Handbook of Descriptive Rhetorical Studies and World Languages offers a useful collection of papers that presents rhetorical analysis of

the discursual practice in different cultural settings Covering issues from America to Europe and Asia and topics from politics to media education to science agriculture to literature and so on the handbook describes how language can guide listeners interpretations alter their perceptions and shape their worldviews This book offers a solid foundation for rhetorical studies to become an essential discipline in arts and humanities engendering innovative theory and applications in areas such as linguistics literature history cultural studies political science and sociology This handbook will be crucial for students and researchers in areas such as literature and linguistics communication studies political science and arts and humanities in general This book will also be useful to social science education business law science and engineering departments due to its coverage of rhetoric in a multidisciplinary and multilingual context Chapter 16 of this book is available for free in PDF format as Open Access from the individual product page at www.routledge.com It has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

A Scientific Approach to Writing for Engineers and Scientists Robert E. Berger, 2014-05-23 A SCIENTIFIC APPROACH TO WRITING Technical ideas may be solid or even groundbreaking but if these ideas cannot be clearly communicated reviewers of technical documents e.g. proposals for research funding articles submitted to scientific journals and business plans to commercialize technology are likely to reject the argument for advancing these ideas The problem is that many engineers and scientists entirely comfortable with the logic and principles of mathematics and science treat writing as if it possesses none of these attributes The absence of a systematic framework for writing often results in sentences that are difficult to follow or arguments that leave reviewers scratching their heads This book fixes that problem by presenting a scientific approach to writing that mirrors the sensibilities of scientists and engineers an approach based on an easily discernable set of principles Rather than merely stating rules for English grammar and composition this book explains the reasons behind these rules and shows that good reasons can guide every writing decision This resource is also

well suited for the growing number of scientists and engineers in the U S and elsewhere who speak English as a second language as well as for anyone else who just wants to be understood Developmental Editing Scott Norton,2024-05-31 The only guide dedicated solely to developmental editing now revised and updated with new exercises and a chapter on fiction Developmental editing transforming a manuscript into a book that edifies inspires and sells is a special skill and Scott Norton is one of the best at it With more than three decades of experience in the field Norton offers his expert advice on how to approach the task of diagnosing and fixing structural problems with book manuscripts in consultation with authors and publishers He illustrates these principles through a series of detailed case studies featuring before and after tables of contents samples of edited text and other materials to make an otherwise invisible process tangible This revised edition for the first time includes exercises that allow readers to edit sample materials and compare their work with that of an experienced professional as well as a new chapter on the unique challenges of editing fiction In addition it features expanded coverage of freelance business arrangements self published authors e books content marketing and more Whether you are an aspiring or experienced developmental editor or an author who works alongside one you will benefit from Norton s accessible collaborative and realistic approach and guidance This handbook offers the concrete and essential tools it takes to help books to find their voice and their audience *Writing, Reading, and Understanding in Modern Health Sciences* Milos Jenicek,2017-07-27 Medical articles are one of the main vehicles of knowledge translation and evidence communication in the health sciences Their correct structure and style alone are no longer enough to convey a clear understanding of the intended message Readers must be able to understand the very essence of the article message That is the purpose of this book *Writing Reading and Understanding in Modern Health Sciences Medical Articles and Other Forms of Communication* will help the authors of medical articles communicate more effectively in today s practice and health research environment It explores the most effective practices for communicating using three main medical literature formats through scientific articles articles where the subject is not based on the practice of the scientific method and business reports Describing how to think beyond the prevailing IMRAD article format this book focuses on the nature content domains of thought and meanings of medical articles The ideas and underlying propositions in this book are complementary to specific requirements appropriate for each type of medical journal After reading this book you will better understand How to write what is considered the most important type of medical article the research based medical article How to write an evidence based argumentative medical article The challenges of clinical case reporting The general framework of medical and research ethics Classification of medical articles and their underlying studies from the causal standpoint Supplying you with the understanding required to write more effective medical articles the book includes details about essay type articles research based articles thesis as introduction sections definitions as part of the material and methods sections modern argumentation and critical thinking underlying results and their discussion and conclusions about them **Bundle: Evergreen: A Guide**
