Taco Fleur, 2019-08-16 The definite kettlebell exercise encyclopedia with kettlebell exercises and variations Over 150 pages filled with photos of kettlebell exercise basic descriptions and links to bonus videos Kettlebell training is a form of resistance training with the kettlebell This encyclopedia and its volumes cover all kettlebell exercises with photos descriptions and some having step by step instructions The information in this book will allow you to pick kettlebell exercises and create your own kettlebell workout and or verify that you re doing the exercises you re already doing correctly This volume covers kettlebell combos isolation and multi planar exercises Each subject has just enough information to keep it basic and understandable Kettlebell Combo A kettlebell combo

is a combination of several exercises put together and performed one after the other usually in a flowing manner. Combos can be as simple as 2 exercises combined but also as complex as 6 exercises or more combined. They are also referred to as a complex. A good example of some well known combos are the clean and jerk, clean and press. A good example of a more complex combo is the UKC Ultimate Kettlebell Combo which consists out of a deadlift, hang clean, swing clean, swing half snatch and strict press. A really simple but powerful combo is the double kettlebell half snatch and squat thruster, also known as WBKC World's Best Kettlebell Combo.

Isolation Exercises This book wouldn't be complete without some isolation exercises. Isolation exercises are those that involve only one joint and a limited number of muscle groups. Isolation allows you to focus more and go heavier. A good example is an exercise that is performed standing up; standing up will require more muscle recruitment, whereas a laying down exercise will take out all those muscles that were required to stand up, i.e. calves, quadriceps, gluteals, erector spinae and many more.

Multi planar Exercises The exercises listed in this category are not the only multi planar exercises; there are many more. A good example of a popular multi planar exercise not listed here is the kettlebell snatch. The reason the exercises are listed under this category is that there was not one parent exercise category under which they fall. In basic terms, multi planar exercises are those that go up, down, back to the side, etc. they move through multiple planes of movement in one rep. A good example of a non multi planar exercise is the shoulder press. Note whether an exercise is or isn't multi planar doesn't make it a bad or good exercise; it just describes that it goes through multiple planes of movement.
