**Globular Clusters - Guides to Galaxies** Tom Richtler, Søren Larsen, 2008-11-23 The principal question of whether and how globular clusters can contribute to a better understanding of galaxy formation and evolution is perhaps the main driving force behind the overall endeavour of studying globular cluster systems Naturally this splits up into many individual problems The objective of the Joint ESO FONDAP Workshop on Globular Clusters Guides to Galaxies was to bring together researchers both observational and theoretical to present and discuss the most recent results Topics covered in these proceedings are internal dynamics of globular clusters and interaction with host galaxies tidal tails evolution of cluster masses accretion of globular clusters detailed descriptions of nearby cluster systems ultracompact dwarfs formations of massive clusters in mergers and elsewhere the ACS Virgo survey galaxy formation and globular clusters dynamics and

Belew, Melanie Mitchell, 2018-05-04 This book is out of a workshop organized to address questions like these The meeting was sponsored by the Santa Fe Institute and held at Sol y Sombra in Santa Fe New Mexico during July 1993 It brought together a group of about 20 scientists from the disciplines of biology psychology and computer science all studying interactions between the evolution of populations and individuals adaptations in those populations and all of whom make some use of computational tools in their work      *Glossary of Agricultural Biotechnology* Gurbachan Singh Miglani, Parveen Chhuneja, Satbir Singh Gosal, 2025-02-25 The rapid progress in molecular genetic techniques and molecular biology has led to a great expansion in the range of biotechnology applications in agriculture The field is supported by a large number of basic and applied sciences and agricultural biotechnology has become a multidisciplinary field A vast amount of technical terms is required to be grasped by students teachers and research workers and this new Glossary of Agricultural Biotechnology covers all the scientific areas in this important field including agricultural biotechnology artificial intelligence bioinformatics biostatistics cell biology computer science CRISPR Cas cytogenetics DNA nanotechnology epigenetics epigenomics genetics genome editing genomics intellectual property rights molecular biology molecular genetics nanobiotechnology plant breeding plant pathology plant physiology remote sensing therapeutics and tissue culture This book is designed to be an easy to use reference for students teachers research workers workers in biotechnology related government agencies and the biotechnology industry      *Computational Intelligence - Volume I* Hisao Ishibuchi, 2015-12-30 Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly growing research field including a wide variety of problem solving techniques inspired by nature Traditionally computational intelligence consists of three major research areas Neural Networks Fuzzy Systems and Evolutionary Computation Neural networks are mathematical models inspired by brains Neural networks have massively parallel network structures with many neurons and weighted connections Whereas each neuron has a simple input output relation a neural network with many neurons can realize a highly non linear complicated mapping Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non linear mapping required in a particular application task Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language For example it is very difficult to mathematically define the meaning of cold in everyday conversations such as It is cold today and Can I have cold water The meaning of cold may be different in a different situation Even in the same situation a different person may have a different meaning Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language As a result fuzzy systems have been successfully applied to real world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF THEN rules Evolutionary computation includes various population

based search algorithms inspired by evolution in nature Those algorithms usually have the following three mechanisms fitness evaluation to measure the quality of each solution selection to choose good solutions from the current population and variation operators to generate offspring from parents Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of objective functions For example simulation based fitness evaluation is often used in evolutionary design Subjective fitness evaluation by a human user is also often used in evolutionary art and music These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers

Differential Evolution Anyong Qing, 2009-07-23 Differential evolution is a very simple but very powerful stochastic optimizer Since its inception it has proved very efficient and robust in function optimization and has been applied to solve problems in many scientific and engineering fields In Differential Evolution Dr Qing begins with an overview of optimization followed by a state of the art review of differential evolution including its fundamentals and up to date advances He goes on to explore the relationship between differential evolution strategies intrinsic control parameters non intrinsic control parameters and problem features through a parametric study Findings and recommendations on the selection of strategies and intrinsic control parameter values are presented Lastly after an introductory review of reported applications in electrical and electronic engineering fields different research groups demonstrate how the methods can be applied to such areas as multicast routing multisite mapping in grid environments antenna arrays analog electric circuit sizing electricity markets stochastic tracking in video sequences and color quantization Contains a systematic and comprehensive overview of differential evolution Reviews the latest differential evolution research Describes a comprehensive parametric study conducted over a large test bed Shows how methods can be practically applied to mobile communications grid computing circuits image processing power engineering Sample applications demonstrated by research groups in the United Kingdom Australia Italy Turkey China and Eastern Europe Provides access to companion website with code examples for download Differential Evolution is ideal for application engineers who can use the methods described to solve specific engineering problems It is also a valuable reference for post graduates and researchers working in evolutionary computation design optimization and artificial intelligence Researchers in the optimization field or engineers and managers involved in operations research will also find the book a helpful introduction to the topic

**Spike-based learning application for neuromorphic engineering** Anup Das ,Teresa Serrano-Gotarredona, 2024-08-22 Spiking Neural Networks SNN closely imitate biological networks Information processing occurs in both spatial and temporal manner making SNN extremely interesting for the pertinent mimicking of the biological brain Biological brains code and transmit the sensory information in the form of spikes that capture the spatial and temporal information of the environment with amazing precision This information is processed in an asynchronous way by

the neural layer performing recognition of complex spatio temporal patterns with sub milliseconds delay and at with a power budget in the order of 20W The efficient spike coding mechanism and the asynchronous and sparse processing and communication of spikes seems to be key in the energy efficiency and high speed computation capabilities of biological brains SNN low power and event based computation make them more attractive when compared to other artificial neural networks ANN

**The Evolutionary Roots of Human Brain Diseases** Nico J. Diederich, Martin Brüne, Katrin Amunts, Christopher G. Goetz, Professor of Neurological Sciences and Pharmacology Christopher G Goetz, 2024 Traditionally studies and textbooks in Neurology or Psychiatry as well as allied disciplines deal with proximate causes of diseases and therapies but remain mute or minimally interested in their ultimate causes including the phylogeny and adaptive significance of disease manifestations Yet as clinicians or basic researchers we are conscious of potential evolutionary roots of neurological and psychiatric symptoms often offering a rudimentary explanation but never delving deeply into the current role of evolutionary science as it relates to health and disease We may miss appreciation of the role of adaptive properties evolutionarily based neuronal circuitries unbalanced cellular energy demands and the potential health consequences of residual syndromic behaviors that were possibly useful in early times of human development but presently are obsolete and pathological The problem is amplified because there is often no interdisciplinary dialogue between anthropology and evolutionary biology on one side and clinical sciences on the other side However the evolutionary tracing back of disease pathways may disclose unexpected insights and trigger the design of innovative research as well as propel the development of new therapeutic interventions There could also be a better apprehension of compensatory behaviors both at the cellular level as well as the systemic the behavioural levels that could be the expected fruits of such collaborations So far scientists fall short in modeling the complexity of human social life human language or manual dexterity and mental or emotional behaviors that typify human neurological or psychological function and dysfunction Finally there remain obstacles in the form of poor animal modeling for human brain diseases and for human longevity The present book aims to fill these gaps by presenting an evolutionary view of neurological and psychiatric conditions that is meant to complement and enrich existing medical perspectives

**Virus as Populations** Esteban Domingo, 2015-09-25 Virus as Populations Composition Complexity Dynamics and Biological Implications explains fundamental concepts that arise from regarding viruses as complex populations when replicating in infected hosts Fundamental phenomena in virus behavior such as adaptation to changing environments capacity to produce disease probability to be transmitted or response to treatment depend on virus population numbers and in the variations of such population numbers Concepts such as quasispecies dynamics mutations rates viral fitness the effect of bottleneck events population numbers in virus transmission and disease emergence new antiviral strategies such as lethal mutagenesis and extensions of population heterogeneity to nonviral systems are included These main concepts of the book are framed in recent observations on general virus diversity derived from metagenomic studies

and current views on the origin of viruses and the role of viruses in the evolution of the biosphere Features current views on the key steps in the origin of life and origins of viruses Includes examples relating ancestral features of viruses with their current adaptive capacity Explains complex phenomena in an organized and coherent fashion that is easy to comprehend and enjoyable to read Considers quasispecies as a framework to understand virus adaptability and disease processes

**Evolutionary Conservation Biology** Régis Ferrière,Ulf Dieckmann,Denis Couvet,2004-06-10 As anthropogenic environmental changes spread and intensify across the planet conservation biologists have to analyze dynamics at large spatial and temporal scales Ecological and evolutionary processes are then closely intertwined In particular evolutionary responses to anthropogenic environmental change can be so fast and pronounced that conservation biology can no longer afford to ignore them To tackle this challenge areas of conservation biology that are disparate ought to be integrated into a unified framework Bringing together conservation genetics demography and ecology this book introduces evolutionary conservation biology as an integrative approach to managing species in conjunction with ecological interactions and evolutionary processes Which characteristics of species and which features of environmental change foster or hinder evolutionary responses in ecological systems How do such responses affect population viability community dynamics and ecosystem functioning Under which conditions will evolutionary responses ameliorate rather than worsen the impact of environmental change
