Pediatric Formulations Daniel

Bar-Shalom, Klaus Rose, 2014-01-30 Until the 1990s it was generally accepted that medicines were first developed for adults and their use in children was investigated later if at all. One of the main tasks of hospital pharmacies was the manufacturing of child appropriate formulations in a more or less makeshift way. The first change came in 1997 with U.S. legislation that rewarded manufacturers to do voluntary pediatric research. Ten years later the European Union passed legislation that required manufacturers to discuss all pediatric aspects including formulations with the regulatory authorities as a condition of starting the registration procedure. In consequence manufacturers must now cover all age groups including the youngest ones. So far pediatric formulations were more a focus for academic researchers. Through the changed regulatory environment there is now a sudden high commercial demand for age appropriate formulations. This book begins by highlighting the anatomical, physiological and developmental differences between adults and children of different ages. It goes on to review the existing technologies and attempts to draw a roadmap to better innovative formulations in particular for oral administration. The regulatory, clinical, ethical and pharmaceutical framework is also addressed.

Pediatric Clinical Pharmacology Hannsjörg W. Seyberth, Anders Rane, Matthias Schwab, 2011-09-01 The objective of this volume is to give an overview of the present state of the art of pediatric clinical pharmacology including developmental physiology, pediatric specific pathology, special tools and methods for development of drugs for children, assessment of efficacy, toxicity, long term safety etc. as well as regulatory and ethical knowledge and skills. In the future structural and educational changes have to lead back to a closer cooperation and interaction of pediatrics with clinical pharmacology and pharmacy.

Pediatric Drug Development Andrew E. Mulberg, Steven A. Silber, John N. van den Anker, 2011-09-20 Pediatric Drug Development: Concepts and Applications is designed as a reference and textbook and is meant to address the science of differences between the pediatric and adult subject in the development of pharmaceutical products. Considered are the ethics and medical needs of proper understanding the pediatric and adult differences, the business case for proper development of drugs for children as well as the technical feasibility studies and processes that are necessary for a proper pediatric drug development program. The applications of these approaches will benefit all stakeholders and ultimately not only educate but also provide better and safer drugs for pediatric patients.

Translational Stem Cell Research Kristina Hug, Göran Hermerén, 2010-12-25 For many years the ethical discussion surrounding human embryonic stem cell research has focused on the moral status of the embryo. This text takes a wider moral berth and focuses on numerous ethical, legal and social aspects involved in translating the results of stem cell research into diagnostic and therapeutic applications. *Translational Stem Cell Research* is broken into ten sections. It opens with an overview of the latest in stem cell research focusing on specific diseases and the treatment of burn victims. Part II discusses the issues involved in the many steps from bench to bedside ranging from first research in vitro to clinical trials. Part III covers scientific, regulatory and ethical challenges to basic research and Part IV details issues regarding stem cell banks. Part V explores ethical, economic and strategic issues involved in collaboration between universities and

industry and Part VI addresses legal problems raised by patents on human stem cell based inventions plus the extent to which there can be technological solutions to a moral dilemma Part VII presents imaginative ways of communicating research to the general public and how to create conditions for a constructive dialogue Part VIII probes psychosocial and cultural factors affecting judgment and decisions about translational stem cell research and Part IX explores problems and procedures raised by an examination of the evaluation of stem cell research projects in research ethics committees The book closes with a look into the future of translational stem cell research and stem cell based therapeutic applications

Pharmaceutical Formulation Geoffrey D Tovey, 2018-06-25 Formulation is a key step in the drug design process where the active drug is combined with other substances that maximise the therapeutic potential safety and stability of the final medicinal product Modern formulation science deals with biologics as well as small molecules Regulatory and quality demands in addition to advances in processing technologies result in growing challenges as well as possibilities for the field Pharmaceutical Formulation provides an up to date source of information for all who wish to understand the principles and practice of formulation in the drug industry The book provides an understanding of the links between formulation theory and the practicalities of processing in a commercial environment giving researchers the knowledge to produce effective pharmaceutical products that can be approved and manufactured The first chapters introduce readers to different dosage forms including oral liquid products topical products and solid dosage forms such as tablets and capsules Subsequent chapters cover pharmaceutical coatings controlled release drug delivery and dosage forms designed specifically for paediatric and geriatric patients The final chapter provides an introduction to the vital role intellectual property plays in drug development Covering modern processing methods and recent changes in the regulatory and quality demands of the industry Pharmaceutical Formulation is an essential up to date resource for students and researchers working in academia and in the pharmaceutical industry

Ethics of Research Involving Minors Dirk Lanzerath, Marcella Rietschel, 2018 Research involving minors is an area of controversy within medical ethics and medical law Minors represent a vulnerable group for whom particular protective measures are required and who should be excluded from research that does not offer the prospect of direct benefit However the exclusion of minors from research into disorders of relevance to their age group precludes the potential for beneficial medical advances Furthermore effective prevention strategies for common medical conditions with an origin in childhood and adolescence such as mental disorders require the delineation of those who are at increased risk This volume considers the ethical challenges of research with minors for the researchers but also for the involved research ethics committees In particular it reflects how minors can be more involved in the decision making processes and reports about the experiences in conducting the European multicentric research project IMAGEMEND
