

Bacteria Identification Guide

Use this guide to identify the bacteria in the Ch. 20 Review Quiz

Identification of most common bacteria is based on 2 criteria: (1) shape, and (2) Gram stain color.

- Shape:
 - Bacilli bacteria (singular- Bacillus) are elongated or rod shaped.
 - Cocci bacteria (singular- Coccus) are round or spherical.
 - Spirilli bacteria (singular- spirillum) are helical, or spiral.

- Gram staining is a process that helps identify bacteria. In this process four different solutions are applied to the bacterial cell. Depending on the amount of peptidoglycan in the cell wall, the bacteria cells will stain either purple or pink:
 - Gram positive bacteria have thick layers of peptidoglycan in their cell walls, and retain a solution called crystal violet dye during the staining process. Because of this, they appear purple.
 - Gram negative bacteria have thin layers of peptidoglycan in their cell walls, and retain a solution called safranin during the staining process. They appear pink when stained.

Thomas, 2012-12-06 After the publication of the Diagnostic Manual for the Identification of Insect Pathogens the authors received many queries asking why they had not included the larger metazoan parasites as well as the microbial forms An examination of the literature indicated that pictorial guides to the identification of nematodes and the immature stages of

insect parasites were unavailable Consequently we decided to rewrite the sections covering insect pathogens and combine these with new sections on entomogenous nematodes and the immature stages of insect parasites The result is the present laboratory guide which is unique in covering all types of biotic agents which are found inside insects and cause them injury or disease Included as parasites are insects and nematodes Among the pathogens included are viruses rickettsias bacteria fungi and protozoans Emphasis is placed on identification with an attempt to use the most easily recognizable characters Use of a certain number of technical terms is unavoidable and explanations of these can be found in most biological dictionaries or the glossary of invertebrate pathology prepared by Steinhaus and Martignoni 1970 **Audiovisual Guide to the**
