The Field Guide to Mixing Social and Biophysical Methods in Environmental Research Rebecca Lave, Stuart Lane, 2025-02-25 Despite ongoing debates about its origins the Anthropocene a new epoch characterized by significant human impact on the Earth's geology and ecosystems is widely acknowledged Our environment is increasingly a product of interacting biophysical and social forces shaped by climate change colonial legacies gender norms hydrological processes and more Understanding these intricate interactions requires a mixed methods approach that combines qualitative and quantitative biophysical and social research However mixed methods environmental research remains rare hindered by academic boundaries limited training and the challenges of interdisciplinary collaboration Time funding and the integration of diverse data further complicate this research whilst the dynamics and ethics of interdisciplinary teams add another layer of complexity Despite these challenges mixed methods research offers a more robust and ultimately transformative understanding of environmental questions This Field Guide aims to inspire and equip researchers to undertake such studies Organized like a recipe book it assists researchers in the preparation of their field work as well as offering entry points to key methods and providing examples of successful mixed methods projects This book will be of interest to scholars wishing to tackle environmental research in a more holistic manner spanning sister disciplines such as anthropology statistics political science public health archaeology geography history ecology and Earth science

Population Circulation and the Transformation of Ancient Zuni Communities Gregson Schachner, 2012-04-01 Because nearly all aspects of culture depend on the movement of bodies objects and ideas mobility has been a primary topic during the past forty years of archaeological research on small scale societies Most studies have concentrated either on local moves related to subsistence within geographically bounded communities or on migrations between regions resulting from pan regional social and environmental changes Gregson Schachner however contends that a critical aspect of mobility is the transfer of people goods and information within regions This type of movement which geographers term population circulation is vitally important in defining how both regional

social systems and local communities are constituted maintained and most important changed Schachner analyzes a population shift in the Zuni region of west central New Mexico during the thirteenth century AD that led to the inception of major demographic changes the founding of numerous settlements in frontier zones and the initiation of radical transformations of community organization Schachner argues that intraregional population circulation played a vital role in shaping social transformation in the region and that many notable changes during this period arose directly out of peoples attempts to create new social mechanisms for coping with frequent and geographically extensive residential mobility By examining multiple aspects of population circulation and comparing areas that were newly settled in the thirteenth century to some that had been continuously occupied for hundreds of years Schachner illustrates the role of population circulation in the formation of social groups and the creation of contexts conducive to social change
