Systems Librarianship: A Practical Guide for Librarians offers new systems librarians and interested LIS students foundational knowledge about the field of systems librarianship as well as practical information and strategies for common projects like migrating a library system and technology planning. With up to date information based on a survey of 200 practicing systems librarians, the current professional literature and on the job experience, this practical guide covers everything a new systems librarian should know in order to succeed in this field. The first half of the book covers background information about the systems librarian position, hiring trends and job searching tips as well as essential knowledge on library systems like the ILS content management systems and emerging technology. The second half of the book provides how to information for some of the most common and often daunting projects a new systems librarian might be expected to take on, including systems migration, website redesign, technology planning and project management. Also included are where to find useful resources and support from the library community such as pertinent listservs, professional associations, conferences and journals, blogs and other professional content. Finally, the book features informational interviews with over a dozen systems librarians working in a variety of library types across the professional spectrum, offering their experienced takes and advice on libraries, technology and the profession. While new systems librarians can often feel overwhelmed and underprepared for their first professional position, this book will serve as a useful resource for navigating the ins and outs of this dynamic and challenging field. Characterisation of Soft Magnetic Materials Under Rotational Magnetisation Stanislaw Zurek, 2017-11-22. The book presents practical aspects related to the measurement of rotational power loss in soft magnetic materials. The book furthermore focuses on practical aspects of performing such measurements, the associated difficulties as well as solutions to the most common problems. Numerous practical aspects, hands on experience and most commonly encountered pitfalls are heavily discussed in the book. The text begins with an introduction to magnetism, then follows with definitions of measurement methods of rotational power loss from a physical viewpoint. Two chapters describe and detail the various sensors which can be employed for such measurements as well as all the aspects of designing, making and using a magnetising apparatus. A synthesis of the likely optimal design of a magnetising apparatus is also given, preceded with the full reasoning based on all the research carried out to date. Characterisation of Soft Magnetic Materials Under Rotational Magnetisation serves as an excellent starting point for any student having to perform magnetic measurements under rotational magnetisation but also under 1D, 2D or 3D excitation. Because the methods, sensors and apparatus are extensively discussed, it will also be a great reference for more senior researchers and experts in the field.

There is a whole chapter devoted to analysis of measurement uncertainty This subject is rarely published for magnetic measurements which makes it more difficult for all researchers to understand the concepts and methodology used in uncertainty estimation This chapter not only introduces the whole subject but also provides multiple step by step examples which can be easily followed from very simple cases to much more complex ones All equations are presented with full SI units which greatly helps in practical application of the presented methodology Each chapter is written in such a way that it can be studied on its own so that the reader can focus only on the specific aspects as required
