However, this position of leadership is not a birthright and it is now under pressure. In recent years, the rapid globalization of markets, labor pools, and capital flows have encouraged many strong national competitors. During the same period, national policies have not sufficiently buttressed the ecosystem or have generated side effects that have reduced its effectiveness. As a result, the U S position in IT leadership today has materially eroded compared with that of prior decades, and the nation risks ceding IT leadership to other nations within a generation. *Assessing the Impacts of Changes in the Information Technology R D Ecosystem* calls for a recommitment to providing the resources needed to fuel U S IT innovation, to removing important roadblocks that reduce the ecosystem's effectiveness in generating innovation and the fruits of innovation, and to becoming a lead innovator and user of IT. The book examines these issues and makes recommendations to strengthen the U S IT R D ecosystem.
