small molecules have increasingly been applied in plant biology to dissect and understand biological systems This is evident
from the frequent use of potent and selective inhibitors of enzymes or other biological processes such as transcription
translation or protein degradation In contrast to animal systems which are nurtured from drug research the systematic
development of novel bioactive small molecules as research tools for plant systems is a largely underexplored research area
This is surprising since bioactive small molecules bear great potential for generating new powerful tools for dissecting
diverse biological processes In particular when small molecules are integrated into genetic strategies thereby defining
chemical genetics they may help to circumvent inherent problems of classical forward genetics There are now clear examples
of important fundamental discoveries originating from plant chemical genetics that demonstrate the power but not yet fully
exploited potential of this experimental approach These include the unraveling of molecular mechanisms and critical steps in
hormone signaling activation of defense reactions and dynamic intracellular processes The intention of this Research Topic of
Frontiers in Plant Physiology is to summarize the current status of research at the interface between chemistry and biology
and to identify future research challenges The research topic covers diverse aspects of plant chemical biology including the
identification of bioactive small molecules through screening processes from chemical libraries and natural sources which

rely on robust and quantitative high throughput bioassays the critical evaluation and characterization of the compound s activity selectivity and ultimately the identification of its protein target s and mode of action which is yet the biggest challenge of all Such well characterized selective chemicals are attractive tools for basic research allowing the functional dissection of plant signaling processes or for applied purposes if designed for protection of crop plants from disease New methods and data mining tools for assessing the bioactivity profile of compounds exploring the chemical space for structure function relationships and comprehensive chemical fingerprinting metabolomics are also important strategies in plant chemical biology In addition there is a continuing need for diverse target specific bioprobes that help profiling enzymatic activities or selectively label protein complexes or cellular compartments To achieve these goals and to add suitable probes and methods to the experimental toolbox plant biologists need to closely cooperate with synthetic chemists The development of such tailored chemicals that beyond application in basic research can modify traits of crop plants or target specific classes of weeds or pests by collaboration of applied and academic research groups may provide a bright future for plant chemical biology The current Research Topic covers the breadth of the field by presenting original research articles methods papers reviews perspectives and opinions

The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and thrilling novel that will keep you speculating until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
