Modern Information Retrieval Ricardo Baeza-Yates, Berthier Ribeiro-Neto, 1999 Modern Information Retrieval is a complete textbook for a first course on information retrieval from a computer science perspective It includes up to date coverage of information retrieval applied to text data and to multimedia

Understanding Information Retrieval Systems Marcia J. Bates, 2011-12-20 In order to be effective for their users information retrieval IR systems should be adapted to the specific needs of particular environments The huge and growing array of types of information retrieval systems in use today is on display in Understanding Information Retrieval Systems Management Types and Standards which addresses over 20 types of IR systems These various system types in turn present both technical and management challenges which are also addressed in this volume In order to be interoperable in a networked environment IR systems must be able to use various types of technical standards a number of which are described in this book often by their original developers The book covers the full context of operational IR systems addressing not only the systems themselves but also human user search behaviors user centered design and management and policy issues In addition to theory and practice of IR system design the book covers Web standards and protocols the Semantic Web XML information retrieval Web social mining search engine optimization specialized museum and library online access records compliance and risk management information storage technology geographic information systems and data transmission protocols Emphasis is given to information systems that operate on relatively unstructured data such as text images and music The book is organized into four parts Part I supplies a broad level introduction to information systems and information retrieval systems Part II examines key management issues and elaborates on the decision process around likely information system solutions Part III illustrates the range of information retrieval systems in use today discussing the technical operational and administrative issues for each type Part IV discusses the most important organizational and technical standards needed for successful information retrieval This volume brings together authoritative articles on the different types of information systems and how to manage real world demands such as digital asset management network management digital content licensing data quality and information system failures It explains how to design systems to address human characteristics and considers key policy and ethical issues such as piracy and preservation Focusing on web based systems the chapters in this book provide an excellent starting point for developing and managing your own IR systems

Information Retrieval Technology Gary Geunbae Lee, 2005-10-11 This book constitutes the refereed proceedings of the Second Asia Information Retrieval Symposium AIRS 2005 held in Jeju Island Korea in October 2005 The 32 revised full papers and 36 revised poster papers presented were carefully reviewed and selected from 136 papers submitted All current issues in information retrieval are addressed applications systems technologies and theoretical aspects of information retrieval in text audio image video and multi media data The papers are organized in topical sections on relevance retrieval models multimedia IR natural language processing in IR enabling

Emergent Information Technologies and Enabling Policies for Counter-Terrorism Robert L. Popp, John Yen, 2006-09-18 Explores both counter terrorism and enabling policy dimensions of emerging information technologies in national security After the September 11th attacks connecting the dots has become the watchword for using information and intelligence to protect the United States from future terrorist attacks Advanced and emerging information technologies offer key assets in confronting a secretive asymmetric and networked enemy Yet in a free and open society policies must ensure that these powerful technologies are used responsibly and that privacy and civil liberties remain protected

Emergent Information Technologies and Enabling Policies for Counter Terrorism provides a unique integrated treatment of cutting edge counter terrorism technologies and their corresponding policy options Featuring contributions from nationally recognized authorities and experts this book brings together a diverse knowledge base for those charged with protecting our nation from terrorist attacks while preserving our civil liberties Topics covered include Counter terrorism modeling Quantitative and computational social science Signal processing and information management techniques Semantic Web and knowledge management technologies Information and intelligence sharing technologies Text data processing and language translation technologies Social network analysis Legal standards for data mining Potential structures for enabling policies Technical system design to support policy Countering terrorism in today's world requires innovative technologies and corresponding creative policies the two cannot be practically and realistically addressed separately

Emergent Information Technologies and Enabling Policies for Counter Terrorism offers a comprehensive examination of both areas serving as an essential resource for students practitioners researchers developers and decision makers
