From Global to Local Statistical Shape Priors Carsten Last,2017-03-14 This book proposes a new approach to handle the problem of limited training data Common approaches to cope with this problem are to model the shape variability independently across predefined segments or to allow artificial shape variations that cannot be explained through the training data both of which have their drawbacks The approach presented uses a local shape prior in each element of the underlying data domain and couples all local shape priors via smoothness constraints The book provides a sound mathematical foundation in order to embed this new shape prior formulation into the well known variational image segmentation framework The new segmentation approach so obtained allows accurate reconstruction of even complex object classes with only a few training shapes at hand

Investigations in Entity Relationship Extraction Sachin Sharad Pawar,Pushpak Bhattacharyya,Girish Keshav Palshikar,2022-10-17 The book covers several entity and relation extraction techniques starting from the traditional feature based techniques to the recent techniques using deep neural models Two important focus areas of the book are i joint extraction techniques where the tasks of entity and relation extraction are jointly solved and ii extraction of complex relations where relation types can be N ary and cross sentence The first part of the book introduces the entity and relation extraction tasks and explains the motivation in detail It covers all the background machine learning concepts necessary to understand the entity and relation extraction techniques explained later The second part of the book provides a detailed survey of the traditional entity and relation extraction problems covering several techniques

proposed in the last two decades The third part of the book focuses on joint extraction techniques which attempt to address both the tasks of entity and relation extraction jointly Several joint extraction techniques are surveyed and summarized in the book It also covers two joint extraction techniques in detail which are based on the authors work The fourth and the last part of the book focus on complex relation extraction where the relation types may be N ary having more than two entity arguments and cross sentence entity arguments may span multiple sentences The book highlights several challenges and some recent techniques developed for the extraction of such complex relations including the authors technique The book also covers a few domain specific applications where the techniques for joint extraction as well as complex relation extraction are applied
