Infrared IR Spectroscopy deals with the infrared part of the electromagnetic spectrum. It measures the absorption of different IR frequencies by a sample positioned in the path of an IR beam. Currently, infrared spectroscopy is one of the most common spectroscopic techniques used in the food industry. With the rapid development in infrared spectroscopic instrumentation software and hardware, the application of this technique has expanded into many areas of food research. It has become a powerful, fast, and non-destructive tool for food quality analysis and control. **Infrared Spectroscopy for Food Quality Analysis and Control** reflects this rapid technology development. The book is divided into two parts: Part I addresses principles and instruments, including theory, data treatment techniques, and infrared spectroscopy instruments; Part II covers the application of IRS in quality analysis and control for various foods, including meat and meat products, fish and related products, and others. It explores this rapidly developing powerful and fast non-destructive tool for food quality analysis and control. Presented in two parts: Principles and Instruments, including theory, data treatment techniques, and instruments; and Application in Quality Analysis and Control for various foods, making it valuable for understanding and application. It fills a need for a comprehensive resource on this area that includes coverage of NIR and MVA.
