

FRONT AXLE PIVOT

The front axle assembly consists of the axle, spindles and wheels. The axle is secured to the tractor front frame member by the pivot pin, 2, Fig. 1, (MF 210 shown).

The pivot pin is secured in place by a bolt, 1, that retains a tab welded to the forward end of the pivot pin. There are two replaceable bushings, 3, in the pin hole. The bushings are externally greased but should their replacement become necessary a suitable puller will be required.

NOTE: When pivot pin bushings are replaced, carefully examine pivot pin for excessive wear and replace if necessary.

FRONT AXLE SPINDLES

The front axle spindles, 4, Fig. 1, (MF 210 shown) are externally greased and are supported in the axle ends by upper and lower bushings, 6. A load supporting bearing, 5, is located on the bottom end of the spindle shaft. Both the bushings and bearings are replaceable, however, bearing replacement will probably require the use of a suitable puller.

NOTE: Bushing replacement should not be made without careful examination of the spindle shaft. If the spindle shaft is excessively worn, bushing replacement will be of little consequence. When in doubt, replace spindle.

IMPORTANT NOTE

Since spindle removal requires removal of steering arm, 7, it is advisable to check front wheel toe-in after reassembly. Also, front wheel toe-in should be checked anytime any part of the steering linkage such as tie rod or tie rod ends are disconnected or replaced. Toe-in specification is 0-4 mm measured at mid height of front wheels and center to center on tire tread.
