Chromospheric Fine Structure R.G. Athay,2012-12-06 The devotion of an IA U symposium entirely to the topic of chromospheric fine structure at a time when models of the spherically symmetric chromosphere are still evolving constitutes a valid recognition of the growing feeling among solar astronomers that the chromosphere cannot be understood independently of its discrete structural features Network structure which seemingly borders the photospheric supergranule cells persists intact throughout the chromosphere and most of the chromosphere corona transition region The network is the locus of the bright coarse mottles and the spicule bushes and is the terminus for one end of the quiet chromospheric fibrils as well Additionally it is the locus of most of the magnetic flux of the quiet chromosphere It is not surprising therefore that current studies of the chromosphere tend to center around efforts to better describe the network phenomena and to ascertain the physical properties of the network features Clearly the supergranule cells and associated network structures constitute a fundamental and singularly important feature of solar structure in the boundary layers Just as it is now clear that much of the chromospheric fine structure is associated with the network bordering supergranule cells it seems equally clear that structural features are almost universally associated with both fluid flow and magnetic geometry Indeed many observers claim that the brightness features faithfully map the magnetic lines of force while still others claim that associated with each class of brightness feature there is a more or less unique fluid flow New Advances in Lunar and Related Planetary Studies Bojing Zhu, Caibo Hu, Changyi Xu, Yaolin Shi, Guangfei Wei, Jinhai Zhang, Juan Li, An Yin, Tieyuan Zhu, 2024-05-14 Many facets of studies in planetary science are dependent on analyzing large volumes of in situ and spacecraft data Our understanding of the lunar evolution and its connection to deeper interior layers has been dramatically improved by the so called deep space exploration missions including NASA's lunar reconnaissance orbiter narrow angle camera China's Moon and Mars exploration program and Chang'e series lunar relay satellite program in coordination with Earth based supporting observations From Apollo 17 lunar surface operations 1972 there are many related operations including China's lunar and deep space exploration Chang'e 1 2007 Chang'e 2 2010 Chang'e 3 2013 Chang'e 4 2018 Chang'e 5 2020 On the 50th anniversary of the final Apollo mission to the Moon this topic will bring together theory numerical models and observations
