Since the first edition of this text, health information technology has only expanded. With increased capability and complexity, the current technology landscape presents new challenges and opportunities for interprofessional teams. Nurses who are already trained to use the analytic process to assess, analyze, and intervene are in a unique position to use this same process to lead teams in addressing healthcare delivery challenges with data. The only informatics text written specifically for advanced practice nurses, *Nursing Informatics for the Advanced Practice Nurse Second Edition* takes an expansive, open, and innovative approach to thinking about technology. Every chapter is highly practical, filled with case studies and exercises that demonstrate how the content presented relates to the contemporary healthcare environment. Where applicable, concepts are aligned with the six domains within the Quality and Safety Education in Nursing (QSEN) approach and are tied to national goals and initiatives. Featuring chapters written by physicians, epidemiologists, engineers, dietitians, and health services researchers, the format of this text reflects its core principle: that it takes a team to fully realize the benefit of technology for patients and healthcare consumers. What's New: Several chapters present new material to support team optimization of electronic health records. Updated national standards and initiatives. Increased focus and new information on usability, interoperability, and workflow redesign throughout, based on latest evidence.
