Mathematics and Mathematicians Lars Gårding, 1998 This book is about mathematics in Sweden between 1630 and 1950 from S Klingenstierna to M Riesz T Carleman and A Beurling It tells the story of how continental mathematics came to Sweden how it was received and how it inspired new results The book contains a biography of Gosta Mittag Leffler the father of Swedish mathematics who introduced the Weierstrassian theory of analytic functions and dominated a golden age from 1880 to 1910 Important results are analyzed and re proved in modern notation with explanations of their relations to mathematics at the time The book treats Backlund transformations Mittag Leffler s theorem the Phragmen Lindelof theorem and Carleman s contributions to the spectral theorem quantum mechanics and the asymptotics of eigenvalues and eigenfunctions **Some Points of Analysis and Their History** Lars Gårding, 1997 This book is a collection of small essays containing the history and the proofs of some important and interesting theorems of analysis and partial differential operators in this century Most of the results in the book are associated with Swedish mathematicians Also included are the Tarski Seidenberg theorem and Wiener s classical results in harmonic analysis and a delightful essay on the impact of distributions in analysis All mathematical points are fully explained but some require a certain mature understanding from the reader This book is a well written simple work that offers full mathematical treatment along with insight and fresh points of view This book is co published with Higher Education Press Beijing and is distributed by the AMS except in China
