Extrusion Processing Technology Jean-Marie Bouvier, Osvaldo H. Campanella, 2014-03-31 Extrusion is the operation of forming and shaping a molten or dough like material by forcing it through a restriction or die. It is applied and used in many batch and continuous processes. However, extrusion processing technology relies more on continuous process operations which use screw extruders to handle many process functions such as the transport and compression of particulate components, melting of polymers, mixing of viscous media, heat processing of polymeric and biopolymeric materials, product texturization and shaping, defibering and chemical impregnation of fibrous materials, reactive extrusion and fractionation of solid liquid systems. Extrusion processing technology is highly complex and in-depth descriptions and discussions are required in order to provide a complete understanding and analysis of this area. This book aims to provide readers with these analyses and discussions. *Extrusion Processing Technology: Food and Non Food Biomaterials* provides an overview of extrusion processing technology and its established and emerging industrial applications. Potency of process intensification and sustainable processing is also discussed and illustrated. The book aims to span the gap between the principles of extrusion science and the practical knowledge of operational engineers and technicians. The authors bring their research and industrial experience in extrusion processing technology to provide a comprehensive technical yet readable volume that will appeal to readers from both academic and practical backgrounds. This book is primarily aimed at scientists and engineers engaged in industry research and teaching activities related to the extrusion processing of foods, especially cereals, snacks, textured and fibrated proteins, functional ingredients and instant powders, feeds, especially aquafeeds and petfoods, bioplastics and plastics, biosourced chemicals, paper pulp and biofuels. It will also be of interest to students of food science, food engineering and chemical engineering. Also available: *Formulation Engineering of Foods* Edited by J E Norton, P J Fryer and I T Norton ISBN 978 0 470 67290 7; *Food and Industrial Bioproducts and Bioprocessing* Edited by N T Dunford ISBN 978 0 8138 2105 4; *Handbook of Food Process Design* Edited by J Ahmed and M S Rahman ISBN 978 1 4443 3011 3 Multiphase Particulate Systems in Turbulent Flows Wioletta Podgórska, 2019-09-17 *Multiphase Particulate Systems in Turbulent Flows: Fluid Liquid and Solid Liquid Dispersions* provides methods necessary to analyze complex particulate systems and related phenomena including physical, chemical and mathematical description of fundamental processes influencing crystal size and shape, suspension rheology, interfacial area of drops and bubbles in extractors and bubble columns. Examples of mathematical model formulation for different processes taking place in such systems is shown. Discussing connections between turbulent mixing mechanisms and precipitation, it discusses influence of fine scale structure of turbulence including its intermittent character on breakage of drops, bubbles, cells, plant cell aggregates. An important aspect of the mathematical modeling

presented in the book is multi fractal taking into account the influence of internal intermittency on different phenomena Key Features Provides detailed descriptions of dispersion processes in turbulent flow interactions between dispersed entities and continuous phase in a single volume Includes simulation models and validation experiments for liquid liquid gas liquid and solid liquid dispersions in turbulent flows Helps reader learn formulation of mathematical models of breakage or aggregation processes using multifractal theory Explains how to solve different forms of population balance equations Presents a combination of theoretical and engineering approaches to particulate systems along with discussion of related diversity with exercises and case studies *Engineering World* ,1921 **Latin American Women and Research Contributions to the**

IT Field Negrón, Adriana Peña Pérez,Muñoz, Mirna,2020-12-18 Although the effort to involve women in engineering has risen in recent years with the creation of new initiatives and the promotion of inclusion in technical disciplines the active participation of women in engineering professions is continuously lower than expected While the need for engineers appears to be constantly increasing women still do not fill most of this role and have a long way to go to even reach an equal split in the field This gender gap has a significant impact how women in the STEM fields are perceived as well as their experiences in their education and careers When it comes to Latin American women in IT their contribution to science can go unnoticed their participation levels in these fields are very low and they often occupy lower level positions than their male counterparts These issues need to be discussed and the experiences of women who work in the field must be shared Latin American Women and Research Contributions to the IT Field highlights the important role of Latin American women in IT by collecting and disseminating their frontier research contributions in order to provide more visibility and inspire greater participation of Latin American women within the major field of computer science With chapters contributed by female authors from eight Latin American and Caribbean countries the book provides a deep analysis of these women s trajectory paths to high quality theoretical and applied relevant research in computer science and IT While highlighting areas such as inclusivity and STEM education along with advancements and achievements in topics that include nonverbal interaction in virtual reality fuzzy logic applications in education and ant colony optimization this book is ideal for professionals academics students and researchers working in the fields of information technologies and computer science as well as those interested in gender and women s studies
