Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control lever, an electrical motor actuates the drive control technology, known as a hydraulic actuator, in a digital electro-hydraulic controller instead with a very powerful microcontroller system. All control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To ensure efficient truck operation and service, each truck model has a coding that uniquely identifies the truck.

Troubleshooting

The processor of the electronic control unit analyses analogue and digital signals. The processor interprets digital messages and system errors, and displays an error message on the display/monitor on the seat interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light flashes
- Activation indicator of the manual intervention signal
- The truck brakes with automatic intervention and off the engine mode
- The truck brakes in the emergency function, the manual intervention signal activates off
- An error code appears on display

These functions can be activated by switching off the intervention signal with the key switch. During a repair, the control unit stores whether the error is still present. If the error is no longer present, the truck returns normal operation. If the error persists, the error code reappears on the display and one of the measures listed above is carried out.

Changing the controller

4.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge (ESD) damage to working elements will occur if the controller is moved.

The controller is equipped with a "Threat plug" which is attached to the back to avoid static damage. Connections must never be left open. The system unit monitor and the software version of the controller can be read out via the back connector.

If the controller is replaced, the personal spare part controller must be identified and plug adapted to the cable harness. All necessary information is available on the cable harness.
