

Linear Programming for Optimization

1. Introduction

1.1 Definition

Linear programming is the name of a branch of applied mathematics that deals with solving optimization problems of a particular form. Linear programming problems consist of a linear cost function (consisting of a certain number of variables) which is to be minimized or maximized subject to a certain number of constraints. The constraints are linear inequalities of the variables used in the cost function. The cost function is also sometimes called the objective function. Linear programming is closely related to linear algebra; the most noticeable difference is that linear programming often uses inequalities in the problem statement rather than equalities.

1.2 History

Linear programming is a relatively young mathematical discipline, dating from the invention of the simplex method by G. B. Dantzig in 1947. Historically, development in linear programming is driven by its applications in economics and management. Dantzig initially developed the simplex method to solve U.S. Air Force planning problems, and planning and scheduling problems still dominate the applications of linear programming. One reason that linear programming is a relatively new field is that only the smallest linear programming problems can be solved without a computer.

1.3 Example

(Adapted from [1].) Linear programming problems arise naturally in production planning. Suppose a particular Ford plant can build Escorts at the rate of one per minute, Explorers at the rate of one every 2 minutes, and Lincoln Navigators at the rate of one every 3 minutes. The vehicles get 25, 15, and 10 miles per gallon, respectively, and Congress mandates that the average fuel economy of vehicles produced be at least 18 miles per gallon. Ford loses \$4000 on each Escort, but makes a profit of \$5000 on each Explorer and \$15,000 on each Navigator. What is the maximum profit this Ford plant can make in one 8-hour day?

The cost function is the profit Ford can make by building x Escorts, y Explorers, and z Navigators, and we want to maximize it:

$$-4000x + 5000y + 15000z \quad (1.3.1)$$

The constraints arise from the production times and Congressional mandate on fuel economy. There are 480 minutes in an 8-hour day, and so the production times for the vehicles lead to the following limit:

$$x + 2y + 3z \leq 480 \quad (1.3.2)$$

The average fuel economy restriction can be written:

$$25x + 15y + 10z \geq 18(x + y + z) \quad (1.3.3)$$

which simplifies to:

$$7x - 3y - 8z \geq 0 \quad (1.3.4)$$

There is an additional implicit constraint that the variables are all non-negative: $x, y, z \geq 0$.

The Algorithm Design Manual: Text Steven S. Skiena, 1998 This volume helps take some of the mystery out of identifying and dealing with key algorithms Drawing heavily on the author's own real world experiences the book stresses design and analysis Coverage is divided into two parts the first being a general guide to techniques for the design and analysis of computer algorithms The second is a reference section which includes a catalog of the 75 most important algorithmic problems By browsing this catalog readers can quickly identify what the problem they have encountered is called what is known about it and how they should proceed if they need to solve it This book is ideal for the working professional who uses algorithms on a daily basis and has need for a handy reference This work can also readily be used in an upper division course or as a student reference guide THE ALGORITHM DESIGN MANUAL comes with a CD ROM that contains a complete hypertext version of the full printed book the source code and URLs for all cited implementations over 30 hours of audio lectures on the design and analysis of algorithms are provided all keyed to on line lecture notes

Algorithmische Mathematik Winfried Hochstättler, 2010-04-06 Mit diesem Buch wollen wir verschiedene Teilgebiete der Mathematik aus algorithmischer Perspektive vorstellen und dabei auch Implementierungs und Laufzeitaspekte diskutieren Gleichzeitig möchten wir bei einer verkürzten Grundausbildung in Mathematik in naturwissenschaftlichen und informatischen Studiengängen möglichst viele Teilaspekte der Mathematik vorstellen und vielleicht zu einer vertiefenden Beschäftigung mit dem einen oder anderen Aspekt anregen Unser Ziel ist es dabei nicht den Leser zu einem versierten Anwender der besprochenen Algorithmen auszubilden sondern wir wollen immer ausgehend von konkreten Problemen Analyse und Lösungsstrategien in den Mittelpunkt stellen Hierbei spielen insbesondere Beweise und Beweistechniken eine zentrale Rolle

Optimization Michael Jünger, Volker Kaibel, 2005-05-18 Since its start in 1990 the IPCO conference series held under the auspices of the Mathematical Programming Society has become an important forum for the presentation of recent results in Integer Programming and Combinatorial Optimization. This volume compiles the papers presented at IPCO XI the eleventh conference in this series held June 8-10 2005 at the Technische Universität Berlin. The high interest in this conference series is evident in the large number of submissions. For IPCO XI 119 extended abstracts of up to 10 pages were submitted. During its meeting on January 29-30 2005 the Program Committee carefully selected 34 contributions for presentation in non-parallel sessions at the conference. The final choices were not easy at all since due to the limited number of time slots many very good papers could not be accepted. During the selection process the contributions were refereed according to the standards of refereed conferences. As a result of this procedure you have in your hands a volume that contains papers describing high quality research efforts. The page limit for contributions to this proceedings volume was set to 15. You may find full versions of the papers in scientific journals in the near future. We thank all the authors who submitted papers. Furthermore the Program Committee is indebted to the many reviewers who with their specific expertise helped a lot in making the decisions.

Algorithm Engineering Lasse Kliemann, Peter Sanders, 2016-11-10 Algorithm Engineering is a methodology for algorithmic research that combines theory with implementation and experimentation in order to obtain better algorithms with high practical impact. Traditionally the study of algorithms was dominated by mathematical worst case analysis. In Algorithm Engineering algorithms are also implemented and experiments conducted in a systematic way sometimes resembling the experimentation processes known from fields such as biology chemistry or physics. This helps in counteracting an otherwise growing gap between theory and practice.
