Design Change to Fishery Independent Surveys: When to Adjust and How to Account For It Fabio Campanella, Ben Scoulding, Nathan Bacheler, Kyle Shertzer, 2025-03-07 Fishery independent surveys provide crucial information for monitoring and assessing marine fish stocks Their utility can largely be attributed to sampling procedures that are consistent across space and time such that observed dynamics can reasonably be assumed to reflect those of the

population or community being studied However sometimes changes to the survey design become desirable or necessary They may be desirable if the benefits of modification outweigh the benefits of consistency for example with improvements in sampling technology or efficiency revised survey priorities or increased funding that allows for greater spatial coverage or temporal resolution In other cases changes to the survey design may not be desirable but necessary for example when specific supplies or equipment become unobtainable or with reductions in funding ship time or human resources
