The European Community regards training as a priority area and has therefore developed a series of programmes in the field of vocational training. This book is the result of a pilot project selected under two of these Community Action Programmes. It was initially selected under the COMETT programme concerned with the development of continuing vocational training in the European Community. Moreover, it was one of the few selected projects to receive further funding under a second selection in the context of the LEONARDO DA VINCI Action Programme for the implementation of a European Community Vocational Training policy. It is with great pleasure that I present the outcome of this project which embodies one of the fundamental objectives of the LEONARDO DA VINCI Programme: training for new

If in some processes oxygen is used additional energy is provided at a rate P_{ch} by chemical reactions The flow of energy per unit time can then be written 1 2 From the above it can be made clear that it is the rate of energy fluxes i e 2 intensities $J\ ms$ that determines into which channel the energy goes and how the interaction zone will be modified in its state solid liquid gaseous and geometrical shape plane dip deep hole in other words which kind of treatment process will be established hardening welding drilling etc In the following it will be shown that in fact it is the intensity of the beam which together with the interaction time primarily governs the interaction phenomena 1 1 2 Laser beam properties determining interaction and energy coupling etJeets In order to yield an efficient process it is necessary to obtain adequate intensity at the workpiece and to couple a fraction of the incident power as high as possible into the material The beam properties being of importance in this respect are Hugel 1992 1 the wavelength λ governing in principle the focusability and absorptivity 2 the polarisation having considerable influence on the absorptivity for large angles of incidence 3 the power P which together with the achievable spot diameter d $L\ f$ determines the intensity in the interaction zone 4

Anniversary Feature Papers Steven Y. Liang,2021-04-15 The Journal of Manufacturing and Materials Processing JMMP aims to provide an international forum for the documentation and dissemination of recent original and significant research studies in the analysis of processes equipment systems and materials related to material heat treatment solidification deformation addition removal welding and accretion for the industrial fabrication and production of parts components and products The JMMP was established in 2017 and has published more than 300 contributions It has been listed in the ESCI Inspec IET and Scopus Elsevier In celebration of the anniversary of the JMMP the Editorial Office has put together this Special Issue which includes several representative papers that reflect the vibrant growth and dynamic trend of research in this field *High-power Lasers in Manufacturing* Xiangli Chen,Tomoo Fujioka,Akira Matsunawa,2000 A selection of papers that examine various aspects of high power lasers in manufacturing *Advanced Laser And Competing Technologies Easily Explained* Dieter Schuocker,Georg Schuocker,2021-12-28 High power lasers and their applications in production technology have experienced a vivid development during the last decades and now offer improved performance of classical applications in cutting or welding Processes that are used since a long time have been improved considerably for instance hardening More and more new applications have been developed for instance 3D printing of metals or forming with laser assistance Therefore it is important for production engineers to understand the laser technology and explore how it can be used to enhance production speed quality and reduce cost This book treats the basic principles underlying laser technology long time used equipment and processes but also the most recent improvements and applications then compares it with the competing conventional technologies Each of these two parts is preceded by tutorials that inform the reader about the physical basis of the respective technologies In addition hazards of these technologies and respective protection are treated for both cases

The book concludes with a detailed comparison of competing technologies and lasers to give a prognosis on the future of lasers in manufacturing. It is written in a style that can be read by people without a broad physical basis and avoids the use of derivations and equations but explains all the material in an easily understandable way in simple words.

Oberflächenmodifikation von Aluminiumlegierungen mit Laserstrahlung Agnes Ott, 2009. Durch Oberflächenmodifikation von Aluminiumlegierungen mit Laserstrahlung können Randschichten mit verbesserten Eigenschaften für mechanische, tribologische, chemische und thermische Beanspruchungen erstellt werden. Diese Arbeit untersucht unterschiedliche Laseroberflächenverfahren, die Systemtechnik mit verschiedenen Pulverstäuben und Laserstrahlquellen in Kombination mit diversen Zusatzwerkstoffen. Auf der Basis von Hochgeschwindigkeitsaufnahmen werden Grundlagen und das Verständnis von physikalischen Wechselwirkungsmechanismen vermittelt. Ebenso wird der Prozesswirkungsgrad berechnet und beschrieben, wie Prozessparameter und schnelle Erstarrung das Schichtgefüge beeinflussen. Die Ergebnisse schaffen Zugang zu einer innovativen Technologie. Sie dienen z.B. bei der Steigerung der spezifischen Motorleistung in der Kraftfahrzeugtechnik oder bei Reparaturbeschichtungen im Werkzeugbau zur Erschließung von Anwendungen hoher Qualität. **Euromat 99, Surface Engineering** Heinz Dimigen, 2000-09-08. Surface technology is a truly interdisciplinary topic in materials science. Nearly every component, no matter whether made of steel, metal alloys, ceramics or plastic, is coated prior to its application. The integration of protective coatings into the design of complex components is becoming increasingly important, and there is a great demand for novel coating processes comprising surface modification and deposition. Modern coatings are being developed that can meet several functional requirements simultaneously, e.g. transparent and electrically conductive coatings for display applications. A special feature of this book is the section on laser surface treatment. *Laser und Optoelektronik*, 1997.
