Environmental Protection Agency. Library Systems Branch,1974 Improving Cementitious Properties of Blended Pozzolan Based Materials for Construction of Low Cost Buildings in Mbeya Region, Tanzania Duwa Hamisi Chengula,2018-02-28 This study therefore investigated and improved cementitious properties of pozzolan blended with calcium hydroxide gypsum and cement in order to extend its use from low strength mortars to concrete works which can be used for low to medium rise structural applications Characterization

strength tests and durability tests were performed on pozzolan mixtures under laboratory conditions and the effects of adding gypsum to pozzolan and calcium hydroxide mixtures on the compressive strength and durability of cured concrete specimens were investigated Lightweight Aggregate Concrete Satish Chandra, Leif Berntsson, 2002-10-28 In spite of the increasing use and demand for lightweight aggregate concrete LWAC there is still a lack of adequate explanations to understand the mechanisms responsible for the strength and durability properties of LWAC This book is written to give an overall picture of LWAC from the historical background aggregate production proportioning and production of concrete to applications in structures Physical properties and chemical durability are described in detail The physical properties include density strength shrinkage and elasticity Chemical durability includes resistance to acids chloride ingress carbonation and freeze thaw resistance Fire resistance is also included which is seldom considered but is a very important aspect of the safety of the structure Microstructure development and its relation to the durability properties of LWAC generally are not highlighted in the literature The development of bonds the microstructure with different binder systems and different types of lightweight aggregates are explained They show how lightweight aggregate concrete differs from normal weight concrete The chapters on chloride ingress and freeze thaw resistance are detailed because of the use of LWAC in offshore construction The economical aspects of using LWAC are also reviewed Emphasis is placed on the fact that although the cost of LWAC is high the total cost of construction has to be considered including the cost of transport reinforcement etc When these are considered then LWAC becomes cheaper and attractive The life cycle cost of the concrete is another consideration for calculating long term savings on maintenance costs **Waste to Energy** S. Syngellakis, 2014-12-30 Waste to Energy deals with the very topical subject of converting the calorific content of waste material into useful forms of energy It complements and to a certain degree overlaps with its companion volume Biomass to Biofuels since a significant proportion of biomass converted to energy nowadays originates from various types of waste The material in the first more substantial part of the volume has been arranged according to the type of process for energy conversion Biochemical processes are described in six articles These relate to the production of methane by anaerobic digestion reactor conversion efficiencies investigations on ethanol production from biodegradable municipal solid waste through hydrolysis and fermentation hydrogen production from glucose through a hybrid anaerobic and photosynthetic process biodiesel production from used cooking oil through base catalyzed transesterification Conversions by thermochemical processes are discussed in the subsequent eleven articles of the volume These cover combustion the direct use of heat energy using the heat produced in thermal power stations for steam and ultimately electricity generation municipal solid waste and refuse derived fuel In another article computational fluid dynamics modelling is applied to assess the influence of process parameters and to perform optimization studies A group of articles deal with more complex thermochemical processes involving combustion combined with pyrolysis and gasification Two articles focus on biofuels as feed for fuel cells In the last six articles the emphasis is on management and policy rather

than technical issues
