Archaeologies of Touch David Parisi, 2018-02-27 A material history of haptics technology that raises new questions about the relationship between touch and media Since the rise of radio and television we have lived in an era defined increasingly by the electronic circulation of images and sounds But the flood of new computing technologies known as haptic interfaces which use electricity vibration and force feedback to stimulate the sense of touch offering an alternative way of mediating and experiencing reality In *Archaeologies of Touch* David Parisi offers the first full history of these increasingly vital technologies showing how the efforts of scientists and engineers over the past three hundred years have gradually remade and redefined our sense of touch Through lively analyses of electrical machines videogames sex toys sensory substitution systems robotics and human computer interfaces Parisi shows how the materiality of touch technologies has been shaped by attempts to transform humans into more efficient processors of information With haptics becoming ever more central to emerging virtual reality platforms immersive bodysuits loaded with touch stimulating actuators wearable computers haptic messaging systems like the Apple Watch's Taptic Engine and smartphones vibrations that emulate the feel of buttons and onscreen objects *Archaeologies of Touch* offers a timely and provocative engagement with the long history of touch technology that helps us confront and question the power relations underpinning the project of giving touch its own set of technical media

Robotics Goes MOOC Bruno Siciliano, 2025-04-30 With the massive and pervasive diffusion of robotics technology in our society we are heading towards a new type of AI which we call Physical AI at the intersection of Robotics with AI that is the science of robots and intelligent machines performing a physical action to help humans in their jobs of daily lives Physical assistance to disabled or elderly people reduction of risks and fatigue at work improvement of production processes of material goods and their sustainability safety efficiency and reduction of environmental impact in transportation of people and goods progress of diagnostic and surgical techniques are all examples of scenarios where the new InterAction Technology IAT is indispensable The interaction between robots and humans must be managed in a safe and reliable manner The robot becomes an ideal assistant like the tool used by a surgeon a craftsman a skilled worker The new generation of robots will co exist the cobots with humans not only in the workplace but gradually in homes and communities providing support in services entertainment education health manufacturing and care As widely discussed above interaction plays a crucial role for the development of modern robotic systems Grasping manipulation and cooperative manipulators are covered in the first part of the third book of the *Robotics Goes MOOC* project respectively in Chapter 1 by Prattichizzo et al Chapter 2

by Kao et al and Chapter 3 by Caccavale Specific interaction issues along with the development of digital and physical interfaces are dealt with in Chapter 4 by Marchal et al and in Chapter 5 by Croft et al respectively Interaction between robot and human also means that a robot can be worn by a human as presented in Chapter 6 by Vitiello et al A different type of interaction at a cognitive and planning level is the focus of Chapter 7 by Lima devoted to multi robot systems and Chapter 8 by Song et al on networked cloud and fog robotics respectively

Human Walking in Virtual Environments Frank Steinicke, Yon Visell, Jennifer Campos, Anatole Lécuyer, 2013-05-15 This book presents a survey of past and recent developments on human walking in virtual environments with an emphasis on human self motion perception the multisensory nature of experiences of walking conceptual design approaches current technologies and applications The use of Virtual Reality and movement simulation systems is becoming increasingly popular and more accessible to a wide variety of research fields and applications While in the past simulation technologies have focused on developing realistic interactive visual environments it is becoming increasingly obvious that our everyday interactions are highly multisensory Therefore investigators are beginning to understand the critical importance of developing and validating locomotor interfaces that can allow for realistic natural behaviours The book aims to present an overview of what is currently understood about human perception and performance when moving in virtual environments and to situate it relative to the broader scientific and engineering literature on human locomotion and locomotion interfaces The contents include scientific background and recent empirical findings related to biomechanics self motion perception and physical interactions The book also discusses conceptual approaches to multimodal sensing display systems and interaction for walking in real and virtual environments Finally it will present current and emerging applications in areas such as gait and posture rehabilitation gaming sports and architectural design
