The sky is filled with soft, wispy clouds in shades of orange, yellow, and grey. In the background, a row of houses with dark roofs is silhouetted against the bright sky. The foreground shows dark, out-of-focus grass and foliage.

something for digital photographers that's never been done before. It cuts through the bull and shows exactly how to do it. It's not a bunch of theory; it doesn't challenge readers to come up with their own settings or figure things out on their own. Instead, it tells readers flat out which settings to use, when to use them, and why. This book gives the inside tips and tricks of the trade for organizing, correcting, editing, sharpening, retouching, and presenting photos like a pro. Readers will be absolutely amazed at how easy and effective these techniques are once they know the secrets. This book covers: The real secrets of how the pros retouch portraits; How to color correct any photo without breaking a sweat; How to use Camera Raw for processing not only RAW photos but JPEGs and TIFFs too; The sharpening techniques the pros really use; How to deal with common digital camera image problems including removing noise and avoiding halos; The most requested photographic special effects; All the improved and brand new features of Elements 12 such as the enhanced work environment, the ability to move objects, and have the background automatically filled in one touch; Frames, Effects, and Textures, and the ability to more easily share your images online and with your mobile devices; And much more.

The HDR Book Rafael Concepcion, 2014. When it comes to HDR, only three key ingredients are needed: hardware, software, and post-processing technique. Hardware is simple; there are only a few things you need to set up and shoot an HDR series. Software is vastly improved, making it easier for anyone to create an HDR image. The hard part is the post-processing technique. There are only two options: hours and hours of experimentation, or *The HDR Book*. Featuring real-world interviews with passionate HDR photographers, this updated edition of the popular *The HDR Book* by Rafael RC Concepcion is more than a how-to and different from any other HDR book out there. While other books on HDR tend to lean toward the esoteric or formulaic, this book takes another approach. It's a complete and total HDR workshop that teaches you the one thing that most other books miss: once you've tone-mapped your image with HDR software, you're still not finished. Within the pages of this book, you'll find 10 projects, now updated, shot with everything from a point-and-shoot to a 37-megapixel medium-format camera. The projects are designed to show you how the subtle differences in each scenario (lighting, subject, environment, etc.) dictate the post-processing needed to achieve one of the many final looks covered. You'll learn not only the different tone-map settings RC used, but you'll also learn the final steps taken in Photoshop to complete each image. Then you'll recreate these looks yourself using the exact same RAW files that RC used. Plus, you get four bonus images to play with and create your own look. The end result: a more intrinsic understanding of the nuances of HDR that will help you create the images you've always wanted. Best of all, *The HDR Book* is written using the three top HDR processing programs in the industry today: Photoshop's HDR Pro, Photomatix Pro, and HDR Efex Pro. No matter which program you use, you'll be able to follow along and create your own stunning looks in no time.
