Limit State of Materials and Structures Géry de Saxcé, Abdelbacet Oueslati, Eric Charkaluk, Jean-Bernard Tritsch, 2012-10-18 To determine the carrying capacity of a structure or a structural element susceptible to operate beyond the elastic limit is an important task in many situations of both mechanical and civil engineering The so called direct methods play an increasing role due to the fact that they allow rapid access to the request information in mathematically constructive manners They embrace Limit Analysis the most developed approach now widely used and Shakedown Analysis a powerful extension to the variable repeated loads potentially more economical than step by step inelastic analysis This book is the outcome of a workshop held at the University of Sciences and Technology of Lille The individual contributions stem from the areas of new numerical developments rendering this methods more attractive for industrial design extension of the general methodology to new horizons probabilistic approaches and concrete technological applications

Transforming Markets in the Built Environment Susan Roaf, 2012-08-06 There is an urgent need to build human capacity to make the often vulnerable and exposed buildings and communities we live and work in more resilient to the changing social economic and physical environments around us Extensive research has been done over the last decades on both mitigation and adaptation to climate change in the built environment but the outputs of much of this research have failed to result in the wider uptake of effective greenhouse gas emission reduction solutions This volume introduces credible fresh thinking on how this may be done For the first time an emerging generation of research is brought together that is directly concerned with understanding influencing and leading the transformation of markets and thinking in the built environment Chapters cover defining values setting targets consumer motivation selling existing ideas better developing new design principles paradigms and programmes optimizing solutions to ensure that when change does happen it does so in the right direction Papers are contributed by leading experts in fields ranging from philosophy the social political and physical sciences engineering architecture mathematics and complexity science The resulting volume will be essential reading for all those involved with changing the mindsets of a generation on the need to and ways to build resilience to rapid change and transforming markets in the built environment
