operativo Linux ho avuto l'intuizione impagabile dei particolari sforzi e sfide che le persone affrontano a questo livello. Una delle più grandi sfide per le persone interessate ad imparare è dentro e fuori di Linux semplicemente una mancanza di tempo. Quando state lavorando con risorse limitate e di ottimo valore volete essere sicuri di fare di più. La più grande sfida per i principianti di Linux sapere da dove incominciare. Ci sono molte informazioni disponibili che permettono di decidere come focalizzare la vostra attenzione per prima cosa il grande ostacolo quello di mantenere le persone già dall'inizio. La cosa peggiore iniziare il percorso di studio solo per scoprire molti concetti, comandi e sfumature che non sono spiegate. Questo tipo di esperienza frustrante e vi lascia con più domande che risposte. Ecco perché ho scritto questo libro. Non ho solo sintetizzato il materiale più importante in cinque capitoli, ognuna disegnata per essere studiata in un giorno, ma ho anche strutturato il contenuto in modo logico e sistematico. Questo metodo vi assicurerà di risparmiare tempo studiando prima gli aspetti fondamentali di Linux e successivamente costruire le fondamenta giorno dopo giorno. In *Imparare Linux in 5 giorni* imparerete i concetti e comandi più importanti e sarete guidati passo dopo passo in esempi pratici e di vita reale. I nuovi concetti, comandi o gerghi in cui ci imatteremo sono spiegati in un linguaggio semplice rendendoli di facile comprensione. Ecco qui cosa imparerete leggendo *Imparare Linux in 5 giorni*. Uno dei modi più comuni di rendere disponibili le applicazioni web attraverso lo stack LAMP. LAMP un acronimo che sta per Linux, Apache, MySQL e PHP in questo ambiente. Linux il sistema operativo, Apache il server web, MySQL il server di database e PHP il linguaggio di programmazione. Questa architettura può essere utilizzata per servire applicazioni open source o anche app personalizzate. Siti web famosissimi come Facebook, Wikipedia e Yahoo usano questo ambiente per servire le loro applicazioni a milioni di utenti in tutto il mondo e anche moltissime applicazioni open source quali WordPress, Drupal, Joomla, MediaWiki e SugarCRM si appoggiano allo stack LAMP. Che stiate implementando o facendo da piattaforma ad un'applicazione personalizzata o che stiate usando una soluzione open source, dovreste usare un'architettura che massimizzi il tempo di uptime dell'applicazione, elimini i single point of failure, permetta di scalare senza tempo di fermo e sia relativamente semplice da implementare e supportare. Meglio prendersi il tempo all'inizio per tenere in considerazione i requisiti e gli obiettivi a lungo termine del servizio che state implementando invece di prendere decisioni sull'architettura durante un
