The Teacher's Guide to Media Literacy Cyndy Scheibe, Faith Rogow, 2012 A Deeper Sense of Literacy is the first book to suggest that media literacy is both a content area and an approach to teaching that can be integrated into any subject area. It combines theory and practical application in a way that addresses the most important questions related to media literacy in education today: what is it, why is it important, how can you teach it across a wide range of curriculum areas and grade levels, and does it work? Rather than focusing on how to teach media literacy, Scheibe and Rogow focus on actually using media literacy to teach lessons across the content areas.

Tears of the Cheetah Stephen J. O'Brien, 2015-10-27 The history of life on Earth is dominated by extinction events so numerous that over 99.9% of the species ever to have existed are gone forever. If animals could talk, we would ask them to recall their own ancestries, in particular the secrets as to how they avoided almost inevitable annihilation in the face of daily assaults by predators, climatic cataclysms, deadly infections, and innate diseases. In *Tears of the Cheetah*, medical geneticist and conservationist Stephen J. O'Brien narrates fast-moving science adventure stories that explore the mysteries of survival among the earth's most endangered and beloved wildlife. Here we uncover the secret histories of exotic species such as Indonesian orangutans, humpback whales, and the imperiled cheetah, the world's fastest animal, which nonetheless cannot escape its own genetic weaknesses. Among these genetic detective stories, we also discover how the Serengeti lions have lived with FIV, the feline version of HIV, where giant pandas really come from, how bold genetic action pulled the Florida panther from the edge of extinction, how the survivors of the medieval Black Death passed on a genetic gift to their descendents, and how mapping the genome of the domestic cat solved a murder case in Canada. With each riveting account of animal resilience and adaptation, a remarkable parallel in human medicine is drawn, adding yet another rationale for species conservation: mining their genomes for cures to our own fatal diseases. *Tears of the Cheetah* offers a fascinating glimpse of the insight gained when geneticists venture into the wild.

case based approach to learning Students now are being asked to learn material outside of the class so they can engage in active classroom discussion and participate in different group activities Not only content therefore but style in the classroom is changing fast the flipped classroom being ever more popular Part of the challenge for the world historian is figuring out how this type of pedagogy can be applied in a setting where the sage on the stage approach is being replaced by more interactive forms of learning Asked to regularly participate students are being asked not to memorize but how to think and how to evaluate the reliability of different sources of information Looking to build on interactive learning The Thinking Past is based on the premise that asking questions and evaluating sources represents a new and an insightful way of presenting material on world history While content on states such as the Songhay the Ming and the Aztecs and on nomadic people remains an important part of the work we believe that the classroom experience of debating different issues such as the origins of war and the nature of empire serves as a solid foundation for actually thinking about world history
