**Lipid and Biopolymer Monolayers at Liquid Interfaces** K.S. Birdi,2013-06-29 During the past few decades much research has been reported on the formation of insoluble monomolecular films of lipids and biopolymers synthetic polymers and proteins on the surface of water or at the oil water interface This interest arises from the fact that monomolecular film studies have been found to provide much useful information on a molecular scale information that is useful for understanding many industrial and biological phenomena in chemical agricultural pharmaceutical medical and food science applications For instance information obtained from lipid monolayer studies has been useful in determining the forces that are known to stabilize emulsions and biological cell membranes The current texts on surface chemistry generally devote a single chapter to the characteristics of spread monolayers of lipids and biopolymers on liquids and a researcher may have to review several hundred references to determine the procedures needed to investigate or analyze a particular phenomenon Furthermore there is an urgent need at this stage for a text that discusses the state of the art regarding the surface phenomena exhibited by lipids and biopolymers as they are relevant to a wide variety of surface and interfacial processes    Self-Assembly

Monolayer Structures of Lipids and Macromolecules at Interfaces K.S. Birdi,2007-05-08 Self assembly monolayer SAM structures of lipids and macromolecules have been found to play an important role in many industrial and biological phenomena This book describes two procedures namely the STM and AFM that are used to study SAMs at solid surfaces K S Birdi examines the SAMs at both liquid and solid surfaces by using the Langmuir monolayer method This book is intended for researchers academics and professionals    *Liquid-Liquid Interfaces Theory and Methods* Alexander G. Volkov,David W.

Koutsoukos,2003-07-01 The 14th Conference of the European Colloid and Interface Society ECIS 2000 was held in September 2000 in Patras GREECE Researchers from the academia and the

industrial sector met and presented research work divided in nine thematic sections molecular interactions in thin films polymer surfactant interactions structure and dynamics at interfaces biocolloids colloids in pharmaceutical and biological applications new trends in colloid and interface science techniques rheology self assembly of amphiphiles and measurements in concentrated suspensions Selected contributions from these thematic areas are presented in the present volume and show the up today achievements of the Colloid and Interface Science   **Scanning Probe Microscopes** K. S. Birdi,2003-02-26 Scanning Probe Microscopes Applications in Science and Technology explains analyzes and demonstrates the most widely used microscope in the family of microscopes the scanning probe microscope Beginning with an introduction to the development of SPMs the author introduces the basics of scanning tunneling and atomic force microscopes STMs an
