Computational Science - ICCS 2002
Peter M.A. Sloot,C.J. Kenneth Tan,Jack J. Dongarra,Alfons G. Hoekstra,2003-08-01 Computational Science is the scientific discipline that aims at the development and understanding of new computational methods and techniques to model and simulate complex systems The area of application includes natural systems such as biology environmental and geosciences physics and chemistry and synthetic systems such as electronics and financial and economic systems The discipline is a bridge between classical computer science logic complexity architecture algorithms mathematics and the use of computers in the aforementioned areas The relevance for society stems from the numerous challenges that exist in the various science and engineering disciplines which can be tackled by advances made in this field For instance new models and methods to study environmental issues like the quality of air water and soil and weather and climate predictions through simulations as well as the simulation supported development of cars airplanes and medical and transport systems etc Paraphrasing R Kenway R D Kenway Contemporary Physics 1994 There is an important message to scientists politicians and industrialists in the future science the best industrial design and manufacture the greatest medical progress and the most accurate environmental monitoring and forecasting will be done by countries that most rapidly exploit the full potential of computational science Nowadays we have access to high end computer architectures and a large range of computing environments mainly as a consequence of the enormous stimulus from the various international programs on advanced computing e g **Subject Guide to Books in Print** ,1996

Euroabstracts ,1984 Stochastic Transport in Upper Ocean Dynamics III Bertrand Chapron,Dan Crisan,Darryl D. Holm,Etienne Mémin,Jane-Lisa Coughlan,2024-11-18 This open access proceedings volume brings selected peer reviewed contributions presented at the Fourth Stochastic Transport in Upper Ocean Dynamics STUOD 2023 Workshop held at IFREMER in Plouzan France September 25 28 2023 The STUOD project is supported by an ERC Synergy Grant and led by Imperial College London the National Institute for Research in Computer Science and Automatic Control INRIA and the French Research Institute for Exploitation of the Sea IFREMER The project aims to deliver new capabilities for assessing variability and uncertainty in upper ocean dynamics It will provide decision makers a means of quantifying the effects of local patterns of sea level rise heat uptake carbon storage and change of oxygen content and pH in

the ocean Its multimodal monitoring will enhance the scientific understanding of marine debris transport tracking of oil spills and accumulation of plastic in the sea All topics of these proceedings are essential to the scientific foundations of oceanography which has a vital role in climate science Studies convened in this volume focus on a range of fundamental areas including Observations at a high resolution of upper ocean properties such as temperature salinity topography wind waves and velocity Large scale numerical simulations Data based stochastic equations for upper ocean dynamics that quantify simulation error Stochastic data assimilation to reduce uncertainty These fundamental subjects in modern science and technology are urgently required in order to meet the challenges of climate change faced today by human society This proceedings volume represents a lasting legacy of crucial scientific expertise to help meet this ongoing challenge for the benefit of academics and professionals in pure and applied mathematics computational science data analysis data assimilation and oceanography
