

Your task: survive until all the zombies are dead and equations (formulas) become your best friend! You will see exponential growth and decay in the days to go.

How to Survive a Zombie Attack

The town has 100,000, is overrun with all zombies and must be saved within 10 years, no the making. Their objective is to "save" the entire human race from extinction! They need 1 zombie to begin their attack. This zombie was born 1 hour ago, but they are not sure how long it will take them to completely take every human on the planet. Complicate the battle further is that there may be total zombies that will be every day for the first 10 days after attack. The original zombie will lead only 1 zombie, but

every 10 minutes they will spread another one but the people take the 100,000 and other humans.

Day	Number of Zombies born each day	Day	Number of Zombies removed each day
0	1	0	
1	11	1

1. What is the growth rate you notice in the number of zombies born each day?

2. What would this data look like on a graph? Would it graph like this data?
