*DevOps for Compliance: Building Automated Compliance Pipelines for Cloud Security* Deepak Antiya,2024-12-30 DevSecOps is a cultural change aiming to integrate security into the rapid release cycles typical of modern software application development and delivery known as DevOps. The ultimate goal of DevSecOps is to have development security and operations teams working together to create business value through the fast delivery of secure software using a process of continuous security. This integration is a concept that the IT industry has long wrestled with but has become possible only today due to the many evolutions the software engineering industry has undergone in the last 20 years. The Agile and DevOps movements promoted the necessary culture and tools needed to bring DevSecOps into life. This chapter explores what DevSecOps is, what we secure and the benefits of DevSecOps adoption. It concludes with common misconceptions about the term. I hope that by the end of the chapter you will be able to understand the difference between DevSecOps continuous security and security as code.
