

# HP ArcSight ESM: powered by CORR-Engine

Simple, intelligent, efficient, and manageable

"ArcSight ESM enables us to effectively analyze our log data and know what's really happening on our network. We are able to raise awareness within our organization, comply with our own global IT security policy, and meet audit reporting needs—and in the process, we've become a business enabler."

—Marc Seiffert,  
Senior IT specialist, BMW Group

HP ArcSight ESM is the brain of the HP ArcSight SIEM platform. It analyzes and correlates every event that occurs across the organization—every login, logoff, file access, database query—to deliver accurate prioritization of security risks and compliance violations. The powerful correlation engine of HP ArcSight ESM sifts through millions of log records to find the critical incidents that matter. These incidents are then presented through real-time dashboards, notifications, or reports to the security administrator.

## Understand the context of every event

HP ArcSight ESM helps identify the meaning of any given event by placing it within context of what, where, when, and why that event occurred and its impact on the organization. ArcSight correlation delivers accurate and automated prioritization of security risks and compliance violations in a business relevant context. Real-time alerts show administrators the most critical security events occurring in the environment, along with the context necessary to further analyze and mitigate a breach.

ArcSight ESM also incorporates a management console that simplifies administrative tasks making the solution easy to deploy, maintain, and use. Using ArcSight ESM administrators and analysts are able to:

- **Detect more incidents**  
The new architecture will allow event correlation rates of up to five times the current performance using the same hardware.
- **Address more data**  
The new architecture will enable storage capacity of up to 10 times the current capacity for correlated events using the same disk space.
- **Operate more efficiently**  
The use of a common data store allows both the real-time correlation application and the log management application to use the same set of data, providing a seamless workflow that includes detection, alerting, forensic analysis, and reporting.
