Linear Algebra and Its Applications David C. Lay, 2012 Linear algebra is relatively easy for students during the early stages of the course when the material is presented in a familiar concrete setting But when abstract concepts are introduced students often hit a brick wall Instructors seem to agree that certain concepts such as linear independence spanning subspace vector space and linear transformations are not easily understood and require time to assimilate Since they are fundamental to the study of linear algebra students understanding of these concepts is vital to their mastery of the subject David Lay introduces these concepts early in a familiar concrete \mathbb{R}^n setting develops them gradually and returns to them again and again throughout the text so that when discussed in the abstract these concepts are more accessible Note This is the standalone book if you want the book access card order the ISBN below 0321399145 9780321399144 Linear Algebra plus MyMathLab Getting Started Kit for Linear Algebra and Its Applications Package consists of 0321385179 9780321385178 Linear Algebra and Its Applications 0321431308 9780321431301 MyMathLab MyStatLab Glue in Access Card 0321654064 9780321654069 MyMathLab Inside Star Sticker **Explorations of Mathematical Models in Biology**

with MATLAB Mazen Shahin, 2013-12-24 Explore and analyze the solutions of mathematical models from diverse disciplines As biology increasingly depends on data algorithms and models it has become necessary to use a computing language such as the user friendly MATLAB to focus more on building and analyzing models as opposed to configuring tedious calculations Explorations of Mathematical Models in Biology with MATLAB provides an introduction to model creation using MATLAB followed by the translation analysis interpretation and observation of the models With an integrated and interdisciplinary approach that embeds mathematical modeling into biological applications the book illustrates numerous applications of mathematical techniques within biology ecology and environmental sciences Featuring a quantitative computational and mathematical approach the book includes Examples of real world applications such as population dynamics genetics drug administration interacting species and the spread of contagious diseases to showcase the relevancy and wide applicability of abstract mathematical techniques Discussion of various mathematical concepts such as Markov chains matrix algebra eigenvalues eigenvectors first order linear difference equations and nonlinear first order difference equations Coverage of

difference equations to model a wide range of real life discrete time situations in diverse areas as well as discussions on matrices to model linear problems Solutions to selected exercises and additional MATLAB codes Explorations of Mathematical Models in Biology with MATLAB is an ideal textbook for upper undergraduate courses in mathematical models in biology theoretical ecology bioeconomics forensic science applied mathematics and environmental science The book is also an excellent reference for biologists ecologists mathematicians biomathematicians and environmental and resource economists
