Make Analytics Great Again Martyn Richard Jones, 2025-07-14 Now full disclosure I'm not a statistician I'm not even a failed statistician I'm a data information and knowledge architect Which lets face it sounds like someone who builds libraries for robots And in a way I do Except the robots are middle managers and the libraries are databases full of regrets and bad formatting But I respect statisticians I admire them They are the quiet librarians of empirical truth toiling away with n values and confidence intervals while the rest of the world's busy building AI models that can't even tell the difference between a cat and a war crime And so I wrote this to say statisticians matter Analysts matter Truth matters And if they can't or won't say it themselves because they're too busy validating regressions or crying into their R scripts then I'll do it I'll defend them whether they like it or not It's my form of vigilante justice like Batman but with pivot tables Yes this book is multi-modal and

multi model No it won't give you all the answers But it will ask better questions than How do we maximise synergy in the Q4 vertical So here it is A book that tries against all odds against the tide of meaningless metrics and digital chicanery to make analytics useful accessible and just the tiniest bit decent Because in a world where the truth has to compete with corporate nonsense dressed as insight someone has to stick up for the bar charts that mean something Let's make analytics great again Or at least not completely unbearable Enjoy

Lean Analytics Harry Altman, 2017-09-21 LEAN ANALYTICS Lean Analytics opens up the world of collecting and analyzing data to new

entrepreneurs by showing them how to use data as a powerful tool without getting consumed from it to build launch and grow their startup faster while focusing on the right metrics Without data any good entrepreneur will lie to themselves about how good their business really is Building a company successfully comes down to finding the golden middle between believing in your dream and building something the world actually needs and data is the balancing pole that lets you walk on this tightrope Much of Lean Analytics is about finding a meaningful metric then running experiments to improve it until that metric is good enough for you to move on to the next problem or the next stage of your business In a startup you don't always know which metrics are key because you're not entirely sure what business you're in You're still trying to find the right product or the right target audience In a startup the purpose of analytics as discussed in this book is to find your way to the right product and market before the money runs out
