

L SCALE: LOGARITHMS

This is another direct reading scale. The logarithm of any number consists of two parts: The Characteristic which is found to the left of the decimal point and the Mantissa which is found to the right of the decimal point. To find the logarithm (to Base 10) of any number, locate the number on the D Scale and read the Mantissa of its logarithm on the L Scale. And, to complete the logarithm, determine the characteristics with this rule: For all numbers greater than one, the characteristic is one less than the number of places to the left of the decimal point in that number; for all numbers less than one

(decimal fractions), the characteristic is negative and its numerical value is one more than the number of zeros between the decimal point and the first significant figure. (Example) to find the logarithm of 425, set the hairline over 425 on the D Scale and read the mantissa of the logarithm, 0.628, on the L Scale; since 425 has three digits, the characteristic is one less, or 2, and the complete logarithm is 2.628.

(Example) if the logarithm is known, i.e. 3.248, set the hairline over 248 on the L Scale, read 177 on the D Scale; since the characteristic is 3, add one zero to make the number 1770, which is correct.

S SCALE: SINES AND COSINES

This scale gives a direct reading of the sines and cosines of all angles between 5.7 and 90 degrees. In using your S Scale, read Sines left-to-right and Cosines right-to-left. Because angles are usually expressed in terms of degrees and minutes, it is necessary to translate the minutes into tenths of

degrees. Six minutes equal 1/10 of one degree, e.g. 15° 30' equals 15.5°. To find the sine (or cosine) of an angle on the S Scale, set the hairline on the graduation that represents the angle and read the sine (or Cosine) on the D Scale; the decimal point is always placed at the left of your answer as read from the D Scale.

T SCALE: TANGENTS AND COTANGENTS

The T Scale works in the same fashion as the S Scale, except it reads from 5.7 to 45 degrees and tangents and cotangents are found on both the C1 and the D Scales. To find angle values of tangents, set the hairline on the graduation that represents the angle and read (a) on the D Scale, tangents of angles from 5.7 to 45 degrees, cotangents of angles from 45 to 84.3 degrees; (b) on the C1 Scale, read tangents of angles from 45 to 84.3 degrees, cotangents of angles

from 5.7 to 45 degrees. Further, if the tangent or cotangent value is read on the D Scale, the decimal point is at the left of the first digit read; if the value read is on the C1 Scale, the decimal point is at the right of the first digit read. By setting the left index of the C1 Scale directly over the left index of the D Scale, it is possible to read Log Sin and Log Cos values. Further, by reversing the procedures outlined, it is possible to determine angles when the sine, cosine, tangent or cotangent is known.

ST SCALE: SINES AND TANGENTS

This is a direct reading scale for angles less than 5.7° and angles between 84.3° and 89.42°. The ST scale is used in conjunction with the C scale to determine sines and tangents; and used with the C1 scale to determine cosines and cotangents. Sines and tangents are read on the C scale and have one zero in the reading; cosines and cotangents are read on the C1 scale and have two zeros in the reading; degrees are always read on the ST scale. In example, sin 2° = tan 2° = .0349 read on the C scale, cos 2° = cot 2° = .9996 read on the C1 scale.

INSTRUCTIONS

HOW TO USE YOUR PICKETT SLIDE RULE

This instruction guide will help you teach yourself the fundamentals of using your Pickett Slide Rule to obtain answers to mathematical problems. Accuracy and understanding are most important in using your slide rule—speed will come with experience. Study each phase of these instructions and be confident of each operation before you go on to the next one. Teach yourself in this sequence: (1) Learn the parts of the slide rule and how to read the scales; (2) Learn multiplication, division and proportion using the C, D and C1 Scales; (3) Learn to use the A, B and K Scales to find squares of numbers, square roots, cubes of numbers and cube roots; (4) Learn to use the L, S, T and ST Scales to find Logarithms, Sines, Cosines, Tangents and Cotangents for trigonometric calculations.

KNOW YOUR SLIDE RULE

To simplify explanations, the parts of your slide rule and their proper names are shown below. All references in these instructions will be in accordance with this identification.

READING THE SCALES

This is the most important part of learning how to use your slide rule; formulas can be memorized or written down for reference, but only you can read a correct answer from your rule. In general, slide rules provide answers accurate to three, and sometimes four, significant figures. A significant figure is the first digit of a number that is not a zero, regardless of where the decimal point is located; a zero is a significant figure only when it is found between one or more significant figures. The following are samples of numbers with only three significant figures:

6230	0.375	0.00895	0.703
7.23	756,000	0.0128	7.150

Since your slide rule can only provide three,

possibly four, significant figures and will not locate a decimal point, we rely upon the problem itself and our own mental appraisal to determine the number of zeros and the location of the decimal point in the answer. This will be discussed below.

The C and D Scales are identical and they are basic for multiplication and division; if you learn to read these scales, you will be able to read all other scales because the same principles are applied. For the learning example, we will use the D Scale.

The D Scale is divided into Primary, Secondary and Tertiary divisions, each being represented by a mark (or graduation) on the scale. We locate a number by reading the graduations to determine a primary, secondary and tertiary significant figure.

These are the tertiary graduations which locate the third significant number of an answer. Note that as the Secondary and Primary divisions are placed closer together, the value of the Tertiary division changes. This should be remembered when reading

an answer. Practice finding three significant figure numbers so that you can find them at any point on the D Scale. When you feel you can read these numbers accurately, go on to multiplication.
