Childress,2023-10-14 The multiple related fields encompassed by this Major Reference Work represent a convergence of issues and topics germane to the rapidly changing segments of knowledge and practice in educational communications and technology at all levels and around the globe There is no other comparable work that is designed not only to gather vital current and evolving information and understandings in these knowledge segments but also to be updated on a continuing basis in order to keep pace with the rapid changes taking place in the relevant fields The Handbook is composed of substantive 5 000 to 15 000 words peer reviewed entries that examine and explicate seminal facets of learning theory research and practice It provides a broad range of relevant topics including significant developments as well as innovative uses of technology that promote learning performance and instruction This work is aimed at researchers designers developers instructors and other professional practitioners   *Machine Learning for Neuroscience* Chuck Easttom,2023-07-31 This book addresses the growing need for machine learning and data mining in neuroscience The book offers a basic overview of the neuroscience machine learning and the required math and programming necessary to develop reliable working models The material is presented in a easy to follow user friendly manner and is replete with fully working machine learning code Machine Learning for Neuroscience A Systematic Approach tackles the needs of neuroscience researchers and practitioners that have very little training relevant to machine learning The first section of the book provides an overview of necessary topics in order to delve into machine learning including basic linear algebra and Python programming The second section provides an overview of neuroscience and is directed to the computer science oriented readers The section covers neuroanatomy and physiology cellular neuroscience neurological disorders and computational neuroscience The third section of the book then delves into how to apply machine learning and data mining to neuroscience and provides coverage of artificial neural networks ANN clustering and anomaly detection The book contains fully working code examples with downloadable working code It also contains lab assignments and quizzes making it appropriate for use as a textbook The primary audience is neuroscience researchers who need to delve into machine learning programmers assigned neuroscience related machine learning projects and students studying methods in computational neuroscience   Handbook of Research on Managing and Designing Online Courses in Synchronous and Asynchronous Environments Durak, Gürhan,Çankaya, Serkan,2021-12-17 In order to be successful online learning should be planned systematically It can be said that offering distance education courses without preparation and knowledge about the theoretical background can cause drawbacks While distance education has become widespread and popular it is observed that there could be problems in its application Such problems can include technical problems inability to meet the learning needs at the learners own speeds lack of communication among learners and between learners and teachers and lack of quality materials appropriate for online learning or the inclusion of materials used in traditional methods

directly into online learning For successful online courses these critical aspects of distance education are important and they should be taken into account by the institutions and the instructors offering online courses The Handbook of Research on Managing and Designing Online Courses in Synchronous and Asynchronous Environments provides up to date knowledge and experiences regarding technologies processes and environments for online course design in distance education systems and covers topics related to the aspects of successful distance education systems with a focus on teaching and learning in online environments Focusing on topics such as instructional design and integrated systems it is an ideal guide for online course designers instructional designers curricula developers administrators educators researchers trainers and students

Meeting the Challenges to Measurement in an Era of Accountability Henry Braun,2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4 8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at http www taylorfrancis com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4 0 license   **Handbook of Artificial Intelligence in Education** Benedict du Boulay,Antonija Mitrovic,Kalina Yacef,2023-01-20 Gathering insightful and stimulating contributions from leading global experts in Artificial Intelligence in Education AIED this comprehensive Handbook traces the development of AIED from its early foundations in the 1970s to the present day   *Online Learning in Mathematics Education* Karen Hollebrands,Robin Anderson,Kevin Oliver,2021-10-27 This book brings together research from mathematics education and instructional design to describe the development and impact of online environments on prospective and practicing teachers learning to teach mathematics The move to online learning has steadily increased over the past decade Its most rapid movement occurring in 2020 with most instruction taking place remotely Chapters in this book highlight issues related to teacher learning in three main contexts formal informal and experiential or practice based This volume brings together researchers from the different but related

fields of instructional design and mathematics education to engage in dialogue around how we design and study the impacts of online learning in general and online mathematics education more specifically The book is very timely with most instruction taking place online and mathematics educators addressing challenges related to supporting teachers formal informal and experiential learning online A chapter in each section will synthesize ideas presented by instructional designers and mathematics educators as it relates to teacher learning in each context At the end of each section a retrospective chapter is presented to reflect on what the different perspectives offer to better understand mathematics teacher learning in online environments This book is of interest to mathematics educators researchers teacher educators professional development providers and instructional designers **Piaget's Genetic Epistemology for Mathematics Education Research** Paul Christian Dawkins,Amy J. Hackenberg,Anderson Norton,2024-01-02 The book provides an entry point for graduate students and other scholars interested in using the constructs of Piaget s genetic epistemology in mathematics education research Constructs comprising genetic epistemology form the basis for some of the most well developed theoretical frameworks available for characterizing learning particularly in mathematics The depth and complexity of Piaget s work can make it challenging to find adequate entry points for learners not least because it requires a reorientation regarding the nature of mathematical knowledge itself This volume gathers leading scholars to help address that challenge The main section of the book presents key Piagetian constructs for mathematics education research such as schemes and operations figurative and operative thought images and meanings and decentering The chapters that discuss these constructs include examples from research and address how these constructs can be used in research There are two chapters on various types of reflective abstraction because this construct is Piaget s primary tool for characterizing the advancement of knowledge The later sections of the book contain commentaries reflecting on the contributions of the body of theory developed in the first section They connect genetic epistemology to current research domains such as equity and the latest in educational psychology Finally the book closes with short chapters portraying how scholars are using these tools in specific arenas of mathematics education research including in special education early childhood education and statistics education

Orchestration of Learning Environments in the Digital World Dirk Ifenthaler,Pedro Isaías,Demetrios G. Sampson,2022-01-31 This volume focuses on the implications of digital technologies for educators and educational decision makers that are not widely represented in the literature The chapters contained in the volume are based on the presentations at the 2020 edition of the CELDA conference and cover multiple developments in the field such as deploying learning technologies proposing pedagogical approaches and practices to address digital transformation and presenting case studies of specific technologies and contexts The chapters form a lively debate and provide a comprehensive analysis of the contribution of learning technologies designed to improve the learning process and the experience of the students as well as to develop key competences Teaching and Learning Mathematics Online James P.
