Advanced Biological, Physical, and Chemical Treatment of Waste Activated Sludge Antoine Prandota

Trzcinski, 2018-11-02 Recently research efforts aiming to improve energy efficiency of wastewater treatment processes for large centralized wastewater treatment plants WWTPs have been increasing. Global warming impacts, energy sustainability, and biosolids generation are among several key drivers towards the establishment of energy efficient WWTPs. WWTPs have been recognized as major contributors of greenhouse gas emissions as these are significant energy consumers in the industrialized world. The quantity of biosolids or excess waste activated sludge produced by WWTP will increase in the future due to population growth and this poses environmental concerns and solid waste disposal issues. Due to limited capacity of landfill sites, more stringent environmental legislation, and air pollution from incineration sites, there is a need to rethink the conventional way of dealing with wastewater and the sludge production that comes with it. This book provides an overview of advanced biological, physical, and chemical treatment with the aim of reducing the volume of sewage sludge. It provides a comprehensive list of processes aiming at reducing the volume of sewage sludge and increasing biogas production from waste activated sludge. Includes clear process flowsheet showing how the process is modified compared to the conventional waste activated sludge process. Provides current technologies applied on full scale plant as well as methods still under investigation at laboratory scale. Offers data from pilot scale experience of these processes.

Recent Progress in Solid Dispersion Technology Kohsaku Kawakami, 2019-10-01 Amorphous solid dispersion (ASD) is a powerful formulation technology to improve oral absorption of poorly soluble drugs. Despite their being in existence for more than half a century, controlling ASD performance is still regarded as difficult because of ASD's natural non-equilibrium. However, recent significant advances in ASD knowledge and technology may enable a much broader use of ASD technology. This Special Issue, which includes 3 reviews and 6 original articles, focuses on recent progresses in ASD technology in hopes of helping to accelerate developmental studies in the pharmaceutical industry. In striving for a deep understanding of ASD non-equilibrium behavior, the Special Issue also delves into and makes progress in the theory of soft matter dynamics.
