How We Can Save The Planet Preventing Global Climate Catastrophe:

How We Can Save the Planet Mayer Hillman, Tina Fawcett, Sudhir Chella Rajan, 2008-03-04 Mayer Hillman is one of Britain's most original and influential thinkers and has spent the past 30 years turning conventional political thinking on its head. In this book he offers a blueprint to avoid environmental catastrophe and questions the commitment of governments in adopting eco-friendly policies.

How We Can Save the Planet Mayer Hillman, Tina Fawcett, Sudhir Chella Rajan, 2025-08-22 An outstanding overview on global warming and what we can do about it from a distinguished world class authority. Climate change is the single biggest problem that humankind has ever had to face as we continue with lifestyles that are way beyond the planet's limits. In this book Mayer Hillman explains the real issues, what role technology can play, how you and your community can make changes, and why governments must act now to protect our planet for later generations. *How We Can Save the Planet Preventing Global Climate Catastrophe* takes us out of the problem and into the solution of our global crisis.

The Suicidal Planet Mayer Hillman, Tina Fawcett, Sudhir Chella Rajan, 2007-04-17 An outstanding overview on global warming and what we can do about it from a distinguished world class authority. Climate change is the single biggest problem that humankind has ever had to face as we continue with lifestyles that are way beyond the planet's limits. Mayer Hillman explains the real issues, what role technology can play, how you and your community can make changes, and what governments must do now to protect our planet for future generations. In *The Suicidal Planet* he proposes a ceiling on greenhouse gas emissions by the world's governments. Global carbon rationing to reduce our individual carbon outputs to a fair and ecologically safe level. Helpful guidelines for the home, travel, and leisure. And much much more. Featuring the very latest information on global warming, completely revised to include U.S. facts and figures. *The Suicidal Planet* takes us out of the problem and into the solution of our international crisis.

Generating Electricity in a Carbon-Constrained World Fereidoon Sioshansi, 2009-10-21 The electric power sector is what keeps modern economies going, and historically fossil fuels provided the bulk of the energy need to generate electricity, with coal a dominant player in many parts of the world. Now, with growing concerns about global climate change, this historical dependence on fossil fuels, especially those rich in carbon, are being questioned. Examining the implications of the industry's future in a carbon-constrained world, a distinct reality is the subject of this book. Containing contributions from renowned scholars and academics from around the world, this book explores the various energy production options available to power companies in a carbon-constrained world. The three-part treatment starts with a clear and rigorous exposition of the short-term options, including Clean Coal and Carbon Capture and Sequestration Technology. Coal and Emission trading. Renewable energy options such as Nuclear Energy, Wind power, Solar power, Hydro electric, and Geothermal energy are clearly explained, along with their trade-offs and uncertainties inherent in evaluating and choosing different energy options, and provides a framework for assessing policy solutions. This is followed by self-contained chapters of case studies from all over the world. Other topics discussed in the book are: Creating markets for

tradable permits in the emerging carbon era Global Action on Climate Change The Impossibility of Staunching World CO2 Emissions and Energy efficiency Clearly explains short term and long term options Contributions from renowned scholars and academics from around the world Case studies from all over the world

Interpretive Approaches to Global Climate Governance Chris Methmann, Delf Rothe, Benjamin Stephan, 2013-06-03 Global climate change is perceived to be one of the biggest challenges for international politics in the 21st century This work seeks to fuse a global governance perspective together with different interpretive approaches offering a novel way of looking at international climate politics Equipped with a common interpretive tool kit the authors examine different issue areas and excavate the contours of an overall pattern the depoliticisation of climate governance It is this concept which represents the overarching theme connecting the different contributions addressing issues such as how the securitization of climate change conceals its socio economic roots how highly political decisions and value judgements are couched in the terms of science how the reframing of climate change as a matter of economic calculation and investment narrows the scope of political action and how the prevailing concentration on technological solutions to climate change turns it into a mere administrative issue to be tackled by experts Highlighting the depoliticisation of highly political issues provides a means to bring the political back into one of the most important issue areas of 21st century world politics The editors have assembled a series of 14 interpretive inquiries into discourses of global climate governance which aim to flesh out an interpretive methodology demonstrating the value it offers to those seeking to achieve a better understanding of global climate governance This work will be of great interest to students and scholars of environmental politics political theory and climate change

Research Handbook on International Energy Law Kim Talus, 2014-04-25 International energy law is an elusive but important concept There is no body of law called international energy law nor is there any universally accepted definition for it yet many specialised areas of international law have a direct relationship

Personal Carbon Trading Yael Parag, Tina Fawcett, 2017-07-28 Personal carbon trading is rapidly moving up the political agenda as recognition grows of its potential to address urgent issues of climate change and natural resource use Under personal carbon trading schemes a carbon allowance would be allocated to each individual to be used and traded in the same way as in national and international carbon trading schemes This volume presents the latest research on personal carbon trading at different scales from the effects on the individual communities and organisations to its place in national EU including the EU ETS and global policy landscapes It presents key research on the economic and policy barriers and implications and will be essential reading for anyone involved in emissions trading research or policymaking

The Politics of Energy Steve Vanderheiden, 2013-09-13 This book brings together leading scholars on the politics of energy examining the natural resources and developing technologies that are essential to its production and the various public and private factors affecting its use along with the ecological consequences of both Section One examines the looming challenges posed by continuing dependence upon oil as a primary energy source including peak oil scenarios and the

social and political consequences of resource extraction upon the developing world Section Two considers proposals to dramatically increase nuclear power production as a means to reduce carbon emissions with both the risks and potential of this nuclear option carefully weighed Although many tout renewable energy sources for their environmental benefits Section Three calls attention to several potential problems with large scale renewable energy development and the dilemmas that they have caused for would be supporters of such efforts Finally Section Four weighs the prospects for developing sustainable energy systems on the ground including conservation measures that reduce energy demand and system wide energy policy efforts Together these essays demonstrate the importance of sound energy policy along with the numerous obstacles to developing and implementing it This book was originally published as a special issue of Environmental Politics

The Language of Trees: A Rewilding of Literature and Landscape Katie Holten, 2023-04-04 NATIONAL BESTSELLER Inspiring insights that are scientific intimate and surprising a call to action for those who still care The Washington Post Inspired by forests trees leaves roots and seeds The Language of Trees A Rewilding of Literature and Landscape invites readers to discover an unexpected and imaginative language to better read and write the natural world around us and reclaim our relationship with it In this gorgeously illustrated and deeply thoughtful collection Katie Holten gifts readers her tree alphabet and uses it to masterfully translate and illuminate beloved lost and new original writing in praise of the natural world With an introduction from Ross Gay and featuring writings from over fifty contributors including Ursula K Le Guin Ada Lim n Robert Macfarlane Zadie Smith Radiohead Aimee Nezhukumatathil James Gleick Elizabeth Kolbert Plato and Robin Wall Kimmerer Holten illustrates each selection with an abiding love and reverence for the magic of trees She guides readers on a journey from creation myths and cave paintings to the death of a 3 500 year old cypress tree from Tree Clocks in Mongolia and forest fragments in the Amazon to the language of fossil poetry unearthing a new way to see the natural beauty all around us and an urgent reminder of what could happen if we allow it to slip away The Language of Trees considers our relationship with literature and landscape resulting in an astonishing fusion of storytelling and art and a deeply beautiful celebration of trees through the ages *Life, Liberty, and the Pursuit of Happiness* ,2012 *Climate Change Ethics for an Endangered World* Thom Brooks, 2020-10-25 Climate change confronts us with our most pressing challenges today The global consensus is clear that human activity is mostly to blame for its harmful effects but there is disagreement about what should be done While no shortage of proposals from ecological footprints and the polluter pays principle to adaptation technology and economic reforms each offers a solution but is climate change a problem we can solve In this provocative new book these popular proposals for ending or overcoming the threat of climate change are shown to offer no easy escape and each rest on an important mistake Thom Brooks argues that a future environmental catastrophe is an event we can only delay or endure but not avoid This raises new ethical questions about how we should think about climate change How should we reconceive sustainability without a status quo Why is action more urgent and necessary than

previously thought What can we do to motivate and inspire hope Many have misunderstood the kind of problem that climate change presents as well as the daunting challenges we must face and overcome Climate Change Ethics for an Endangered World is a critical guide on how we can better understand the fragile world around us before it is too late This innovative book will be of great interest to students and scholars of climate change climate justice environmental policy and environmental ethics

Any Way You Slice It Stan Cox,2013-05-07 Rationing it s a word and idea that people often loathe and fear Health care expert Henry Aaron has compared mentioning the possibility of rationing to shouting an obscenity in church Yet societies in fact ration food water medical care and fuel all the time with those who can pay the most getting the most As Nobel Prize winning economist Amartya Sen has said the results can be thoroughly unequal and nasty In Any Way You Slice It Stan Cox shows that rationing is not just a quaint practice restricted to World War II memoirs and 1970s gas station lines Instead he persuasively argues that rationing is a vital concept for our fragile present an era of dwindling resources and environmental crises Any Way You Slice It takes us on a fascinating search for alternative ways of apportioning life s necessities from the goal of fair shares for all during wartime in the 1940s to present day water rationing in a Mumbai slum from the bread shops of Cairo to the struggle for fairness in American medicine and carbon rationing on Norfolk Island in the Pacific Cox s question can we limit consumption while assuring everyone a fair share The author of Losing Our Cool the much debated and widely acclaimed examination of air conditioning s many impacts here turns his attention to the politically explosive topic of how we share our planet s resources

The Bridge at the Edge of the World James Gustave Speth,2008-10-01 How serious are the threats to our environment Here is one measure of the problem if we continue to do exactly what we are doing with no growth in the human population or the world economy the world in the latter part of this century will be unfit to live in Of course human activities are not holding at current levels they are accelerating dramatically and so too is the pace of climate disruption biotic impoverishment and toxification In this book Gus Speth author of Red Sky at Morning and a widely respected environmentalist begins with the observation that the environmental community has grown in strength and sophistication but the environment has continued to decline to the point that we are now at the edge of catastrophe Speth contends that this situation is a severe indictment of the economic and political system we call modern capitalism Our vital task is now to change the operating instructions for today s destructive world economy before it is too late The book is about how to do that

Can We Afford the Future? Doctor Frank Ackerman,2010-08-17 According to many scientists climate change is a growing threat to life as we know it requiring a large scale immediate response According to many economists climate change is a moderately important problem the best policy is a slow gradual start to avoid spending too much They can t both be right In this book Frank Ackerman offers a refreshing look at the economics of climate change explaining how the arbitrary assumptions of conventional theories get in the way of understanding this urgent problem The benefits of climate protection are vital but priceless and hence often devalued in cost

benefit calculations Preparation for the most predictable outcomes of global warming is less important than protection against the growing risk of catastrophic change massive investment in new low carbon technologies and industries should be thought of as life insurance for the planet Ackerman makes an impassioned plea to construct a better economics arguing that the solutions are affordable and the alternative is unthinkable If we can't afford the future what are we saving our money for Can we Afford the Future is part of The New Economics series which uses the ideas behind a new more human economics to provide a fresh way of looking at major contemporary issues
