## **How We Do It The Evolution And Future Of Human Reproduction:**

*How We Do It* Robert Martin, 2013-06-11 A primatologist explores the mystery of the origins of human reproduction explaining that understanding the evolutionary past can provide insight into what worked what didn't and what it all means for the future of mankind

*How We Do It* Robert Martin, 2013-06-11 Despite the widespread belief that natural is better when it comes to sex pregnancy and parenting most of us have no idea what natural really means the origins of our reproductive lives remain a mystery Why are a quarter of a billion sperm cells needed to fertilize one egg Are women really fertile for only a few days each month How long should babies be breast fed In *How We Do It* primatologist Robert Martin draws on forty years of research to locate the roots of everything from our sex cells to the way we care for newborns He examines the procreative history of humans as well as that of our primate kin to reveal what's really natural when it comes to making and raising babies and distinguish which behaviors we ought to continue and which we should not Although it's not realistic to raise our children like our ancestors did Martin's investigation reveals surprising consequences of and suggests ways to improve upon the way we do things now For instance he explains why choosing a midwife rather than an obstetrician may have a greater impact than we think on our birthing experience examines the advantages of breast feeding for both mothers and babies and suggests why babies may be ready for toilet training far earlier than is commonly practiced *How We Do It* offers much needed context for our reproductive and child rearing practices and shows that once we understand our evolutionary past we can consider what worked what didn't and what it all means for the future of our species

**Adolf Portmann** Filip Jaroš, Jiří Klouda, 2021-09-07 This edited volume is the first specialized book in English about the Swiss zoologist and anthropologist Adolf Portmann 1897-1982 It provides a clarification and update of Portmann's theoretical approach to the phenomenon of life characterized by terms such as inwardness and self presentation Portmann's concepts of secondary altriciality and the social uterus have become foundational in philosophical anthropology providing a benchmark of the difference between humans and animals In its content this book brings together two approaches historical and philosophical analysis of Portmann's studies in the life sciences and application of Portmann's thought in the fields of biology anthropology and biosemiotics Significant attention is also paid to the methodological implications of his intended reform of biology Besides contributions from contemporary biologists philosophers and historians of science this volume also includes a translation of an original essay by Portmann and a previously unpublished manuscript from his most remarkable English speaking interpreter philosopher Marjorie Grene Portmann's conception of life is unique in its focus on the phenomenal appearance of organisms Confronted with the enormous amount of scientific knowledge being produced today it is even clearer than it was during Portmann's lifetime that although biologists employ physical and chemical methods biology itself is not only physics and chemistry These exact methods must be applied according to what has meaning for living beings If biology seeks to understand organisms as autonomous agents it needs to take display and the interpretation of appearances

as basic characteristics of life The topic of this book is significantly relevant to the disciplines of theoretical biology philosophy philosophical anthropology and biosemiotics The recent epigenetic turn in biology acknowledging the interconnections between organismal development morphology and communication presents an opportunity to revisit Portmann's work and to reconsider and update his primary ideas in the contemporary context

**A Story of Us** Lesley Newson, Peter Richerson, 2021-02-19 Changes in the environment drive evolution and evidence suggests that our ancestors evolved to use cultural adaptations to survive environmental fluctuations of great severity In *A Story of Us* Lesley Newson and Peter Richerson explain the evidence and ideas that provide an account of how they coped using short descriptive stories to illustrate life at different stages of our evolutionary history

*Orthodox Tradition and Human Sexuality* Thomas Arentzen, Ashley M. Purpura, Aristotle Papanikolaou, 2022-11-15 Sex is a difficult issue for contemporary Christians but the past decade has witnessed a newfound openness regarding the topic among Eastern Orthodox Christians Both the theological trajectory and the historical circumstances of the Orthodox Church differ radically from those of other Christian denominations that have already developed robust and creative reflections on sexuality and sexual diversity Within its unique history theology and tradition Orthodox Christianity holds rich resources for engaging challenging questions of sexuality in new and responsive ways What is at stake in questions of sexuality in the Orthodox tradition What sources and theological convictions can uniquely shape Orthodox understandings of sexuality This volume aims to create an agora for discussing sex and not least the sexualities that are often thought of as untraditional in Orthodox contexts Through fifteen distinct chapters written by leading scholars and theologians this book offers a developed treatment of sexuality in the Orthodox Christian world by approaching the subject from scriptural patristic theological historical and sociological perspectives Chapters devoted to practical and pastoral insights as well as reflections on specific cultural contexts engage the human realities of sexual diversity and Christian life From rethinking scripture to developing theologies of sex from eschatological views of eros to reevaluations of the Orthodox responses to science this book offers new thinking on pressing present day issues and initiates conversations about homosexuality and sexual diversity within Orthodox Christianity

**The Family Emotional System** Robert J. Noone, Daniel V. Papero, 2015-10-30 *The Family Emotional System An Integrative Concept for Theory Science and Practice* presents an ongoing dialogue among scientists family investigators and clinicians related to a natural systems view of the family and human behavior that has been occurring over several decades The concept of the family as an emotional system as defined in Bowen theory is presented as the principal integrative concept underlying this dialogue and an effort to move toward a science of human behavior As a natural system the family forms the immediate and most important context for individual development and may be the most central and important environment shaping brain development across the lifetime of the individual This book explains how the family system can serve as an integrative framework within which specific factual discoveries and hypotheses from many areas of science can be brought together and

understood as various manifestations of a coherent whole The Family Emotional System provides understanding of what is entailed in conceptualizing the family as an emotional system a sense of the breadth and depth of knowledge the sciences are contributing to this effort and examples of how this theoretical framework contributes to family research and practice The richness and excitement occurring in the ongoing dialogue between scientists and Bowen family systems practitioners and researchers is captured along with the promise it holds for the study of human behavior

**The Oxford Handbook of Evolutionary Medicine** Martin Brüne, Wulf Schiefenhövel, 2019-01-31 Medicine is grounded in the natural sciences where biology stands out with regard to our understanding of human physiology and the conditions that cause dysfunction Ironically though evolutionary biology is a relatively disregarded field One reason for this omission is that evolution is deemed a slow process Indeed the macroanatomical features of our species have changed very little in the last 300 000 years A more detailed look however reveals that novel ecological contingencies partly in relation to cultural evolution have brought about subtle changes pertaining to metabolism and immunology including adaptations to dietary innovations as well as adaptations to the exposure to novel pathogens Rapid pathogen evolution and evolution of cancer cells cause major problems for the immune system Moreover many adaptations to past ecologies have actually turned into risk factors for somatic disease and psychological disorder in our modern worlds i e mismatch among which epidemics of autoimmune diseases cardiovascular diseases diabetes and obesity as well as several forms of cancer stand out One could add depression anxiety and other psychiatric conditions to the list The Oxford Handbook of Evolutionary Medicine is a compilation of up to date insights into the evolutionary history of ourselves as a species exploring how and why our evolved design may convey vulnerability to disease Written in a classic textbook style emphasising physiology and pathophysiology of all major organ systems the Oxford Handbook of Evolutionary Medicine is valuable reading for students as well as scholars in the fields of medicine biology anthropology and psychology

Understanding the Human Mind John Terrell, Gabriel Terrell, 2020-06-09 Drawing on current research in anthropology cognitive psychology neuroscience and the humanities Understanding the Human Mind explores how and why we as humans find it so easy to believe we are right even when we are outright wrong Humans live out their own lives effectively trapped in their own mind and despite being exceptional survivors and a highly social species our inner mental world is often misaligned with reality In order to understand why John Edward Terrell and Gabriel Stowe Terrell suggest current dual process models of the mind overlook our mind s most decisive and unpredictable mode creativity Using a three dimensional model of the mind the authors examine the human struggle to stay in touch with reality how we succeed how we fail and how winning this struggle is key to our survival in an age of mounting social problems of our own making Using news stories of logic defying behavior analogies to famous fictitious characters and analysis of evolutionary and cognitive psychology theory this fascinating account of how the mind works is a must read for all interested in anthropology and cognitive psychology

**Fathers and Their Children in the First Three Years of Life** Frank L'Engle

Williams,2020-01-27 How ancient is father care of human infants and young children and why did it emerge Is it possible that father care arose among the ancestors of modern humans and became essential for survival Or is it a recent though variable development Is father care an evolved trait of Homo sapiens or is it a learned cultural behavior transmitted across generations in some societies but not others In this important study Frank L Engle Williams examines the anthropological record for evidence of the social behaviors associated with paternity suggesting that ample evidence exists for the importance of such behaviors for infant survival Focusing on the first three postnatal years he considers the implications of father care both in the fossil record and in more recent cross cultural research for the development of such distinctively human traits as bipedalism extensive brain growth language and socialization He also reviews the rituals by which many human societies construct and reinforce the meanings of socially recognized fatherhood Father care was adaptive within the context of the parental pair bond and shaped how infants developed socially and biologically The initial imprinting of socially recognized fathers during the first few postnatal years may have sustained culturally sanctioned indirect care such as provisioning and protection of dependents for nearly two decades thereafter In modern humans this three year window is critical to father child bonding By increasing the survival of children in the past present and quite possibly the future father care may be a driving force in the biological and cultural evolution of Homo sapiens      **Outer Origin** Laura Johnson

Dahlke,2024-04-25 Outer Origin examines the individual social and spiritual implications of ectogenesis also known as artificial womb technology Formerly considered the topic of science fiction such devices are currently being developed and will soon be a medical reality This book offers readers information on the status of this technology and considers the ways in which it may one day fully replace human gestation Ectogenesis has previously been assessed with the future child in mind but this book instead envisions what it might mean for women It explores the value of pregnancy and childbirth in the twenty first century and questions the notion that artificial wombs will lead to full equality of the sexes Outer Origin seeks to elevate the maternal experience by reflecting on the meaning of reproductive technology in our lives People everywhere must ponder the significance of what has heretofore been their most common link shared natality and birth If not Homo sapiens will enter a deep dive into the unknown that of not being of woman born      Health in Transition Andrew J Macnab,Abdallah

Daar,Christoff Pauw,2021-01-26 At STIAS the Health in Transition theme includes a programme to address the epidemic rise in the incidence of non communicable diseases NCDs such as Type 2 diabetes hypertension obesity coronary heart disease and stroke in Africa The aim is to advance awareness research capacity and knowledge translation of science related to the Developmental Origins of Health and Disease DOHaD as a means of preventing NCDs in future generations Application of DOHaD science is a promising avenue for prevention as this field is identifying how health and nutrition from conception through the first 1 000 days of life can dramatically impact a developing individual s future life course and specifically predicate whether or not they are programmed in infancy to develop NCDs in later life Prevention of NCDs is an essential

strategy as if unchecked the burden of caring for a growing and ageing population with these diseases threatens to consume entire health budgets as well as negatively impact the quality of life of millions Africa in particular needs specific focussed endeavors to realize the maximal preventive potential of DOHaD science and a means of generating governmental and public awareness about the links between health in infancy and disease in adult life This volume summarizes the expertise and experience of a leading group of international scientists led by Abdallah Daar brought together at STIAS as part of the Health in Transition programme

**Semiotic Agency** Alexei Sharov, Morten Tønnessen, 2022-02-08 This book invites readers to embark on a journey into the world of agency encompassing humans other organisms cells intracellular molecular agents colonies populations ecological systems and artificial autonomous systems We combine mechanistic and non mechanistic approaches in the analysis of the function and evolution of organisms their subagents and multi organism systems and in this way offer a theoretical platform for integrating biosemiotics with both natural science and the humanities social sciences Agents are autonomous systems that incorporate knowledge on how to make sense of their environment and use it to achieve their goals The functions of all agents are supported by mechanisms at the lowest level however the explanatory power of mechanistic analysis is not sufficient for complex agents Non mechanistic methods rely on the goal directedness of agents whose dynamics follow self stabilized dynamic attractors The properties of attractors depend on stable or slowly changing factors and such dependencies can be interpreted as sign relations if they are adaptive in nature Agents can replace or redirect mechanisms on demand in order to preserve their functions for performing higher level semiotic functions mechanisms are thus only means We assume that mechanism and semiosis are not mutually exclusive and that simple agents can interpret signs mechanistically This assumption allows us to extend semiotic analysis to all agents including ribosomes in cells computers and robots This book challenges established traditions in natural science and the humanities social sciences semiotics no longer appears as restricted to humans and rational thinking and biology is no longer limited to rely exclusively on mechanistic reasoning

**Primates of Park Avenue** Wednesday Martin, 2016-05-31 Like an urban Dian Fossey Wednesday Martin decodes the primate social behaviors of Upper East Side mothers in a brilliantly original and witty memoir about her adventures assimilating into that most secretive and elite tribe After marrying a man from the Upper East Side and moving to the neighborhood Wednesday Martin struggled to fit in Drawing on her background in anthropology and primatology she tried looking at her new world through that lens and suddenly things fell into place She understood the other mothers snobbiness at school drop off when she compared them to olive baboons Her obsessional quest for a Hermes Birkin handbag made sense when she realized other females wielded them to establish dominance in their troop And so she analyzed tribal migration patterns display rituals physical adornment mutilation and mating practices extra pair copulation and more Her conclusions are smart thought provoking and hilariously unexpected Every city has its Upper East Side and in Wednesday s memoir readers everywhere will recognize the strange cultural codes of powerful social hierarchies and the

compelling desire to climb them They will also see that Upper East Side mothers want the same things for their children that all mothers want safety happiness and success and not even sky high penthouses and chauffeured SUVs can protect this ecologically released tribe from the universal experiences of anxiety and loss When Wednesday s life turns upside down she learns how deep the bonds of female friendship really are Intelligent funny and heartfelt *Primates of Park Avenue* lifts a veil on a secret elite world within a world the exotic fascinating and strangely familiar culture of privileged Manhattan motherhood

[A Talent for Friendship](#) John Edward Terrell,2014-11-03 This lively provocative text presents a new way to understand friendship Professor John Terrell argues that the ability to make friends is an evolved human trait not unlike our ability to walk upright on two legs or our capacity for speech and complex abstract reasoning Terrell charts how this trait has evolved by investigating two unique functions of the human brain the ability to remake the outside world to suit our collective needs and our capacity to escape into our own inner thoughts and imagine how things might and ought to be The text is richly illustrated and written in an engaging style and will appeal to students scholars and general readers interested in anthropology evolutionary and cognitive science and psychology more broadly

**Primate Behavioral Ecology** Karen B. Strier,2016-08-25 This comprehensive introductory text integrates evolutionary ecological and demographic perspectives with new results from field studies and contemporary noninvasive molecular and hormonal techniques to understand how different primates behave and the significance of these insights for primate conservation Each chapter is organized around the major research themes in the field with Strier emphasizing the interplay between theory observations and conservation issues Examples are drawn from the classic primate field studies as well as more recent studies on previously neglected species illustrating the vast behavioral variation that exists across the primate order *Primate Behavioral Ecology* 5th Edition also examines how anthropogenic activities are negatively impacting primate populations including a thorough analysis of behavioural plasticity and its implications This fully updated new edition incorporates exciting new discoveries and the most up to date approaches in the field to provide an invaluable overview of the field of primate behavioral ecology and its applications to primate conservation It is considered to be a must read for all students interested in primates

*Curators* Lance Grande,2017-03-21 Over the centuries natural history museums have evolved from being little more than musty repositories of stuffed animals and pinned bugs to being crucial generators of new scientific knowledge They have also become vibrant educational centers full of engaging exhibits that share those discoveries with students and an enthusiastic general public At the heart of it all from the very start have been curators Yet after three decades as a natural history curator Lance Grande found that he still had to explain to people what he does This book is the answer and oh what an answer it is lively exciting up to date it offers a portrait of curators and their research like none we ve seen one that conveys the intellectual excitement and the educational and social value of curation Grande uses the personal story of his own career most of it spent at Chicago s storied Field Museum to structure his account as he explores the value of research and

collections the importance of public engagement changing ecological and ethical considerations and the impact of rapidly improving technology Throughout we are guided by Grande's keen sense of mission of a job where the why is always as important as the what This beautifully written and richly illustrated book is a clear-eyed but loving account of natural history museums their curators and their ever-expanding roles in the twenty-first century *Thank You, Madagascar* Alison Jolly, 2015-03-12 An enchanting book poignant and passionate Geographical A captivating and absorbing account Sir David Attenborough Madagascar is one of the world's natural jewels with over ninety per cent of its wildlife found nowhere else on Earth Few people knew it better than the pioneering primatologist and conservationist Alison Jolly Thank You Madagascar is her eyewitness account of the extraordinary biodiversity of the island and the environment of its people At the book's heart is a conflict between three different views of nature Is the extraordinary forest treasure house of Madagascar a heritage for the entire world Is it a legacy of the forest dwellers' ancestors bequeathed to serve the needs of their living descendants Or is it an economic resource to be pillaged for short-term gain and to be preserved only to deliver benefits for those with political power Exploring and questioning these different views this is a beautifully written diary and a tribute to Madagascar

*Humans* Claudio Tuniz, Patrizia Tiberi Vipraio, 2016-05-24 Based on the latest scientific discoveries this unauthorized biography of the Humans recounts the story of our distant ancestors during the past 6 million years since the line of our extended family separated from that leading to modern chimpanzees The book explains how different species evolved both anatomically and cognitively and describes the impacts of climatic and environmental change on this process It also explores the nature of relationships within and between species describes their everyday lives and discusses how isolated individuals became members of larger social groups The concluding chapters highlight the paramount importance of the emergence of symbolic thought and discuss its contribution to the formation of institutions societies and economies The multifaceted picture that emerges will help the reader to make sense not only of what we were but also of what we are here and now The book is both entertaining and rigorous in integrating results from a wide selection of disciplines It will be particularly suitable for people with a curious and open mind keen to overcome long-standing prejudices on man's place in nature

Wattana Chris Herzfeld, 2016-05-02 She likes tea sews draws on papers and is a self-taught master of tying and untying knots But she is not a crafty woman of the DIY set she is Wattana an orangutan who lives in the Jardin des Plantes Zoo in Paris And it is in Paris where Chris Herzfeld first encounters and becomes impressed by Wattana and her exceptional abilities with knots In *Wattana An Orangutan in Paris* Herzfeld tells not only Wattana's fascinating story but also the story of orangutans and other primates including bonobos chimpanzees and gorillas in captivity Offering a uniquely intimate look at the daily lives of captive great apes Herzfeld uses Wattana's life to trace the history of orangutans from their first arrival in Europe in 1776 to the inhabitants of the Zoo of Paris and other zoos today She provides a close look at the habits technical know-how and skills of Wattana who remarkably uses strings paper rolls rope and even pieces of wood to make things And

she thoughtfully explores how apes individually and often with ingenuity come to terms with and adapt to their captive environments and caretakers Through these stories Wattana sympathetically reveals the extraordinary psychology and distinctive personalities of great apes as well as the interconnections between animal and human lives especially in zoos Scientists predict that orangutans will disappear from the wild by 2030 and captive animals like Wattana may as a result provide our best chance to understand and appreciate their astonishing intelligence and abilities Wattana the accomplished maker of knots is the hero of this poignant book which will enthrall anyone curious about the lives of our primate cousins

Mom Genes Abigail Tucker, 2022-04-05 Everyone knows how babies are made but scientists are only just beginning to understand the making of a mother Mom Genes reveals the hard science behind our tenderest maternal impulses tackling questions such as whether a new mom's brain ever really bounces back why mothers are destined to mimic their own moms or not and how maternal aggression makes females the world's most formidable creatures Publisher's description
