**Digital Enterprises** Henderik A. Proper,Bas van Gils,Kazem Haki,2023-11-14 This book explores different aspects of and provides concrete suggestions to meet the three main challenges for becoming a Digital Enterprise the transition to the digital age the emergence of service ecosystems and the growing role of data as a key underlying resource As a result of these intertwined and mutually amplifying trends today s enterprises are confronted with several challenges that profoundly

impact their design from the definitions of products and services offered to their clients via the business processes that deliver these products and services to the underlying IT infrastructure. The contributions which are written by leading enterprise architecture researchers and managers of large corporations cover four key aspects which form each one part of the book. Part I presents experiences how different enterprises currently already need to embrace and exploit new challenges like blockchain customer centric services or value co creation networks. Part II looks at the need for a new design logic i.e. the need for new ways of thinking regarding the design of enterprises. Part III is concerned with the coordination needed among different stakeholders of the ensuing continuous transformations. Part IV eventually reflects on the ongoing consequences for enterprise modeling as used to capture both the current affairs of an enterprise as well as design study its possible future affairs. The target audience of this book are both master and PhD level students who want to gain insights into key aspects of the challenges confronting digital enterprises as well as enterprise architects and information managers working in enterprises that are on their way to become digital.

**Information Technology for Management** Ewa Ziembka, 2016-03-11

**Hagenberg Business Process Modelling Method** Felix Kossak, Christa Illibauer, Verena Geist, Christine Natschläger, Thomas Ziehermayr, Bernhard Freudenthaler, Theodorich Kopetzky, Klaus-Dieter

Schewe, 2016-04-27. This book presents a proposal for designing business process management BPM systems that comprise much more than just process modelling. Based on a purified Business Process Model and Notation BPMN variant, the authors present proposals for several important issues in BPM that have not been adequately considered in the BPMN 2.0 standard. It focusses on modality as well as actor and user interaction modelling and offers an enhanced communication concept. In order to render models executable, the semantics of the modelling language needs to be described rigorously enough to prevent deviating interpretations by different tools. For this reason, the semantics of the necessary concepts introduced in this book are defined using the Abstract State Machine ASM method. Finally, the authors show how the different parts of the model fit together using a simple example process and introduce the enhanced Process Platform eP2 architecture which binds all the different components together. The resulting method is named Hagenberg Business Process Modelling H-BPM after the Austrian village where it was designed. The motivation for the development of the H-BPM method stems from several

industrial projects in which business analysts and software developers struggled with redundancies and inconsistencies in system documentation due to missing integration The book is aimed at researchers in business process management and industry 4.0 as well as advanced professionals in these areas     *Subject Guide to Books in Print* ,1991     **BPMN 2.0 Handbook Second Edition** Stephen A. White, Conrad Bock, 2011-12-01 Examines what's new and updated in BPMN 2.0 and look at interchange best practice analytics conformance optimization choreography from a technical perspective Also addresses the business imperative for widespread adoption of the standard by examining best practice guidelines BPMN business strategy and the human interface including real life case studies Other chapters tackle the practical aspects of making BPMN model executable and the basic time line analysis of a BPMN model     **Beyond Management** M. Addleson, 2011-09-22 Traditional management structures systems and tools intended to make the first factories of the industrial age efficient are now obsolete Applying them to knowledge work has exactly the opposite effect causing all kinds of breakdowns This book explains why knowledge workers have to manage themselves and tells them how to do it
