Phil Simon, 2008-11-17 What does a Fortune 500 company implementing a multimillion dollar off the shelf system have in common with a 150 person firm building its own system In each case the organization failed to activate and utilize its system as initially conceived by senior management These two organizations are hardly alone On the contrary more than three in five new systems fail Many miss their deadlines Others exceed their initial budgets often by ghastly amounts Even systems activated on time and under budget often fail to produce their expected results and almost immediately experience major problems While the statistics are grim there is at least some good news This doesn't have to be the case Organizations often lack the necessary framework to minimize the chance of system failure at three key points before during and after system implementations Why New Systems Fail provides such a framework with specific tools tips and questions from the perspective of a seasoned independent consultant with more than a decade of related experience The book examines in great detail the root causes of system failures Case studies examples and lessons from actual system implementations are presented in an informative straightforward and very readable manner More than a theoretical or technical text the book offers pragmatic advice for organizations both deploying new systems and maintaining existing ones **Applied Parallel Computing. Oldehoeft, Marydell Tholburn, 2003-07-31 This volume contains the Proceedings of the International Symposium on Computing in Object Oriented Parallel Environments ISCOPE 98 held at Santa Fe New Mexico USA on December 8-11 1998 ISCOPE is in its second year and continues to grow both in attendance and in the diversity of the subjects covered ISCOPE 97 and its predecessor conferences focused more narrowly on scientific computing in the high performance arena ISCOPE 98 retains this emphasis but has broadened to include discrete event simulation

mobile computing and web based metacomputing The ISCOPE 98 Program Committee received 39 submissions and accepted 10 26% as Regular Papers based on their excellent content maturity of development and likelihood for widespread interest These 10 are divided into three technical categories Applications The first paper describes an approach to simulating advanced nuclear power reactor designs that incorporates multiple local solution methods and a natural extension to parallel execution The second paper discusses a Time Warp simulation kernel that is highly configurable and portable The third gives an account of the development of software for simulating high intensity charged particle beams in linear particle accelerators based on the POOMA framework that shows performance considerably better than an HPF version along with good parallel speedup
