them is Understanding Information Theory and Foundations and the other Information Realm Information as a Tool for Exploring Reality The former is intended as an inquiry of the concept of information itself the latter as an inquiry of the use of the concept of information as a methodological tool for diverse forms of inquiries The book was originally planned together with Mark Burgin and only after his passing was transformed by its present editors into his memorial It was intended as a means to promote and disseminate the results of the ongoing research on information stimulated initiated or influenced by the 2021 IS4SI Summit In the present form it goes way beyond its original design to focus on the most recent developments in the fields of information study

Evolutionary Foundations of Learning and Cognition Georgian Federation of Psychologists Academic Team, The field of evolutionary psychology has provided invaluable insights into the origins and mechanisms underlying human learning and cognition At its core this paradigm proposes that the architecture of the mind is the product of specific and recurrent selection pressures acting over deep evolutionary time Shackelford Liddle 2014 From this perspective the human mind is not a blank slate but rather a set of specialized computational mechanisms designed to solve adaptive problems faced by our hunter gatherer ancestors Shackelford Liddle 2014 Evolutionary psychologists argue that attention to adaptive function is key to understanding the design of the human mind They posit that the principles underlying biological evolution such as random mutation and natural selection can be applied to the development of human knowledge and problem solving Sweller Sweller 2006 This view suggests that long term memory functions akin to a genome with learning from others analogous to biological reproduction Similarly working memory when processing novel information can be viewed as an epigenetic system managing environmental information while long term working memory is the epigenetic system s management of genomic information Sweller Sweller 2006 This integrated perspective on the nature of human learning and thought has important implications for how we approach the presentation and acquisition of information The suggestion that the development of human knowledge and biological evolution by natural selection share a common underlying base can be traced back to the ideas of Charles Darwin and has since gained significant traction in the field of evolutionary psychology Cosmides Tooby 2005 The core theoretical assumptions of evolutionary psychology as well as the significant empirical findings that have emerged from this approach offer a powerful framework for unifying the currently disparate subdisciplines of psychological science

behavior analysis By bringing together ideas from behavior analysis neuroscience and epigenetics under a selectionist framework this textbook facilitates understanding of behavior at environmental genetic and neurophysiological levels This grand synthesis of behavior neuroscience and neurobiology roots behavior firmly in biology The book includes special sections New Directions Focus On Note On On the Applied Side and Advanced Section which enhance student learning and provide greater insight on specific topics This book is a valuable resource for advanced undergraduate and graduate students in psychology or other behavior based disciplines especially behavioral neuroscience For additional resources to use alongside the textbook consult the Companion Website at www.routledge.com/cw/pierce

Self-Organization as a New Paradigm in Evolutionary Biology Anne Dambricourt Malassé, 2022-07-04 The epistemological synthesis of the various theories of evolution since the first formulation in 1802 with the transmission of the inherited characters by J B Lamarck shows the need for an alternative synthesis to that of Princeton 1947 This new synthesis integrates the scientific models of self organization developed during the second half of the 20th century based on the laws of physics thermodynamics and mathematics with the emergent evolutionary problematics such as self organized memory This book shows how self organization is integrated in modern evolutionary biology It is divided in two parts The first part pays attention to the modern observations in paleontology and biology which include major theoreticians of the self organization d Arcy Thompson Henri Bergson Ren Thom Ilya Prigogine The second part presents different emergent evolutionary models including the sciences of complexity the non linear dynamical systems fractals attractors epigenesis systemics and mesology with different examples of the sciences of complexity and self organization as observed in the human lineage from both internal embryogenesis morphogenesis and external mesology viewpoints

The Heredity Hoax Richard M. Lerner, Gary Greenberg, 2025-01-30 This innovative and thought provoking book integrates both new authored material and reprints of existing literature that together provide a compelling narrative that reveals the fatally flawed science associated with genetic reductionist accounts of human behavior

and development Through an interdisciplinary lens it illuminates the dynamic nature of human development empowering readers to question established notions and embrace the complexity of our potential Across the book the work of top tier scientists from developmental comparative educational and biological science illuminates theory and research converging on the conclusion that the multiple egregiously flawed work of genetic reductionists should be expunged from research pertinent to human development The book challenges the prevailing reductionist narratives and their application to social policies programs and uses in media Theoretically based and empirically rigorous this multidisciplinary approach to human development will shine a light on the inequities in individuals or groups that suggest that specific genes do not enable them to succeed in life The Heredity Hoax invites graduate programs and advanced undergraduate courses on human development human potential epigenetics and more to delve into the intricate interplay between genes environment and personal growth This will also serve as an unimpeachable source of evidence for researchers educators and social policymakers **Advances**

Evolutionary Theory: Fringe or Central to Psychological Science Danielle Sulikowski,2016-08-08 The computational theory of mind which views the brain as an information processor that operates on cognitive representations is central to modern cognitive psychology and is the dominant perspective from which brain function is conceptualized and studied Evolutionary Psychology EP is the application of evolutionary theory to understanding human behaviour and cognition Unlike other core Psychology topic areas such as Personality Learning or Developmental Psychology however EP is not defined by the subset of psychological phenomena it seeks to describe and understand It is instead defined by a specific meta theoretical perspective from which it seeks to potentially explain all psychological phenomena The central question posed by this volume is whether this over arching nature provides an opportunity for evolutionary approaches to offer an alternative meta theoretical perspective to the information processing representational view of brain function and behavior **Advances in the Study of Behavior** ,1985-04-17 *Advances in the Study of Behavior* *Comparative Psychology* Gary Greenberg,Maury M. Haraway,1998 This volume traces the modern critical and performance history of this play one of Shakespeare s most loved and most performed comedies The essay focus on such modern concerns as feminism deconstruction textual theory and

Evolutionary Perspectives on Social Psychology Virgil Zeigler-Hill,Lisa L. M. Welling,Todd K. Shackelford,2015-05-06 This wide ranging collection demonstrates the continuing impact of evolutionary thinking on social psychology research This perspective is explored in the larger context of social psychology which is divisible into several major areas including social cognition the self attitudes and attitude change interpersonal processes mating and relationships violence and aggression health and psychological adjustment and individual differences Within these domains chapters offer evolutionary insights into salient topics such as social identity prosocial behavior conformity feminism cyberpsychology and war Together these authors make a rigorous argument for the further integration of the two diverse and sometimes conflicting disciplines Among the topics covered How social psychology can be more cognitive without being less social How the self esteem system functions to resolve important interpersonal dilemmas Shared interests of social psychology and cultural evolution The evolution of stereotypes An adaptive socio ecological perspective on social competition and bullying Evolutionary game theory and personality Evolutionary Perspectives on Social Psychology has much to offer students and faculty in both fields as well as evolutionary scientists outside of psychology This volume can be used as a primary text in graduate courses and as a supplementary text in various upper level undergraduate courses Genes and Behaviour David J. Hosken,John Hunt,Nina Wedell,2019-04-15 Provides a broad snapshot of recent findings showing how the environment and genes influence behavior The great debate of nature versus nurture rages on but our understanding of the genetic basis of many behaviors has expanded over the last decade and there is now very good evidence showing that seemingly complex behaviours can have relatively simple genetic underpinnings but also that most behaviours have very complicated genetic and environmental architecture Studies have also clearly shown that behaviors and other traits are influenced not just by genes and the environment but also by the statistical interaction between the two This book aims to end the nature versus nurture argument by showing that behaviors are nature and nurture and the interaction between the two and by illustrating how single genes can explain some of the variation in behaviors even when they are seemingly complex Genes and Behaviour Beyond Nature Nurture puts to rest the nature versus nurture dichotomy providing an up to date synopsis of where we are how far we ve come and where we are headed It considers the effects of a dual inheritance of genes and culture and genes

and social environment and highlights how indirect genetic effects can affect the evolution of behavior It also examines the effect of non self genes on the behavior of hosts shines a light on the nature and nurturing of animal minds and invites us to embrace all the complexity nature and nurture generates and more Explores exciting new findings about behavior and where we go from here Features contributions by top scholars of the subject Seeks to end the nature versus nurture debate forever Genes and Behaviour Beyond Nature Nurture is a unique and eye opening read that will appeal to Ph D Students post doctoral fellows and researchers in evolution and behavior Additionally the book will also be of interest to geneticists sociologists and philosophers

Philosophy of Plant Cognition Gabriele Ferretti, Peter Schulte, Markus Wild, 2024-08-22

This volume features new research about the philosophy of plant intelligence and plant cognition one of the most intriguing and complex current debates at the intersection of biology cognitive science and philosophy The debate about plant cognition is marked by deep disagreements Some theorists are confident that the empirical evidence supports the ascription of cognitive capacities to plants Others hold that such claims are overblown and defend more traditional non cognitive accounts of plant behavior Still others seek to formulate intermediate positions This volume brings together leading researchers from across this theoretical spectrum to tackle the foundational questions that are at issue in the debate about plant cognition The contributions focus on the philosophical questions raised by recent discoveries and controversies in the empirical sciences such as Can plants be said to have genuine cognitive abilities Can they be characterized as representing or perceiving their environment as pursuing goals or even as having some form of conscious experience Which data could provide evidence for such characterizations And what are possible implications of these issues for general questions about the nature of cognition representation perception and consciousness Philosophy of Plant Cognition will be of interest to scholars and students working in philosophy of mind philosophy of biology cognitive science and plant biology

Language, Cognition, and Computational Models Thierry Poibeau, Aline Villavicencio, 2018-01-25 How do infants learn a language Why and how do languages evolve How do we understand a sentence This book explores these questions using recent computational models that shed new light on issues related to language and cognition The chapters in this collection propose original analyses of specific problems and develop computational models that have been tested and evaluated on real data Featuring contributions from a diverse group of experts this interdisciplinary book bridges the gap between natural language processing and cognitive sciences It is divided into three sections focusing respectively on models of neural and cognitive processing data driven methods and social issues in language evolution This book will be useful to any researcher and advanced student interested in the analysis of the links between the brain and the language faculty

Responsive Becoming: Moral Formation in Theological, Evolutionary, and Developmental Perspective Angela Carpenter, 2019-04-18 This volume offers an interdisciplinary study of Reformed sanctification and human development providing the foundation for a constructive account of Christian moral formation that is attentive both to divine grace and to the significance of natural

embodied processes Angela Carpenter's argument also addresses the impressions that such theologies give namely either solitude in the face of adversity or sheer passivity Through careful examination of the doctrine of sanctification in three Reformed theologians John Calvin John Owen and Horace Bushnell Carpenter argues that human responsiveness in the context of fellowship with the triune God provides a basic framework for a theological account of moral transformation Her relational approach brings together divine and human agency in a dynamic process where both are indispensable Supplying an account of moral formation located within Christian salvation while also being attentive to embodied human nature and the sciences this book is vital to all those interested in spiritual formation and the human capacity for love *George Herbert Mead* Peter Hamilton,1992
