Knowledge and Development J. M. Gallagher, 2012-12-06 IRVING E SIGEL This volume of essays is a broad gauged effort directed at reflections on the applicability of Piagetian theory to education Identification and determination of the relevance of Piagetian theory to education is of course not new The bibliographies in this volume do attest to that assertion Then why the persistent interest and why still another volume Rather than deal with the relevance of each article to these issues let us deal with the basic question of why such continued interest in application of Piagetian theory to education and further raise the problem of the feasibility of such a task Three questions come immediately to mind Why the interest in applicability What are some of the problems that arise in application Is Piagetian theory applicable to education Why the continued interest in application of Piagetian theory in education The answer to this question resides in the sociological and educational issues that arose twenty years ago and still persist in American education namely the need to upgrade the quality of education by providing a coherent conceptual system with a developmental emphasis People gravitated to Piaget because it was the only major system sufficiently comprehensive as well as substantive While learning

theories about they do not tie together general cognitive development with specific relevant content areas e.g development of such knowledge domains as number time space geometry etc Thus Piaget offers a development framework within which content areas are embedded

Clinical and Neuropsychological Aspects of Closed Head Injury Dr J Richardson, 2013-11-12 In all industrialised countries closed head injuries are responsible for vast numbers of hospital admissions and days of work lost For instance about 120 000 patients are admitted to hospital in the United Kingdom each year with a diagnosis that reflects closed head injury Such injuries are a major cause of deaths following accidents especially those that involve children and young people and they are also a major cause of handicap and morbidity among the survivors This clinical condition is intrinsically a neurological one but its proper evaluation demands an understanding of the associated psychology and psychopathology At the same time a major neurological condition with such a high level of incidence ought to be extremely informative about the functioning of the human brain and hence provide a major focus for neuropsychological investigation In this book the author seeks to integrate these two different perspectives by reviewing the

clinical and neuropsychological aspects of closed head injury in a manner that is equally intelligible to researchers interested in the effects of brain damage upon human behaviour and to practitioners who are responsible for the assessment management and rehabilitation of head injured patients This is the second edition of a book which was first published in 1990 and which has been extensively revised in the light of the subsequent research in the field The book begins by considering the epidemiology causes and structural neuropathology of closed head injury It then considers the impact of closed head injury on memory cognition language communication personality and social behaviour Finally it outlines the outcome the mechanisms of recovery and the prospects for rehabilitation
