The Family Systems Test (FAST) Thomas M. Gehring, Marianne Debry, Peter K. Smith, 2013-02-01 The Family System Test FAST developed by Thomas M. Gehring is an important new tool for investigating family relations. Based on the structural systemic theory of families, it is a figural technique for representing emotional bonds, cohesion, and hierarchical structures in the family or similar social systems. In this unique volume, the editors draw on current theory and research in family or similar social systems together with a variety of empirical studies that have used the FAST to provide a comprehensive overview and assessment of the test and its use in various clinical research contexts. The book is divided into four sections, each focusing on a different aspect of the FAST. Part I describes the concepts and psychometric properties of the FAST within the context of theoretically and empirically relevant aspects of the field of family psychology as a whole. Special emphasis is given to systematic structural approaches to assessing individual and family functioning. Part II focuses on the use of the FAST in developmental research. For example, the FAST has been used to show how family constructs are influenced by age, type of family, and situation. Part III deals with cross cultural issues and compares the interpersonal constructs of Japanese and Chinese families to Western families. Finally, Part IV addresses the applications of the FAST in clinical setting in diagnosis of biopsychosocial problems and planning and evaluation of clinical interventions. The

Men in Families Alan Booth, Ann C. Crouter, 1998-01-01 Recently the roles of fathers and husbands in families have been recognized as important issues They appear in legislation aimed at deadbeat dads social movements including the Million Man March and Promise Keepers in the development of advocacy groups and in think tanks Therefore contemporary research on men in family relationships has very mixed results Some studies show that fathers have small effects on child development and in preventing antisocial behavior

whereas others suggest no effects Other research claims that the primary importance of men in families is in their role as providers Although some studies state that the husbands and fathers most vital work occurs in new families others indicate that it is when their offspring reach adolescence Confusing the issue even further labor market trends predict that men s family roles may diminish Based on the presentations and discussions from a recent national symposium on men in families held at The Pennsylvania State University this book addresses these issues This is the only book that deals with men s involvement in families in a comprehensive way Although several books focus on fathers alone or on a broader family perspective this is the first book that deals with a variety of family roles on an interdisciplinary basis Although most of the writers are psychologists or sociologists there are key figures in history and anthropology who also make important contributions As such this volume will be useful to scholars students policy specialists and family program administrators
