**Bilingualism and cognitive control** Judith F. Kroll, Ingrid Christoffels, Teresa Bajo, Research on bilingual language processing reveals an important role for control processes that enable bilinguals to negotiate the potential competition across their two languages The requirement for control that enables bilinguals to speak the intended language and to switch between languages has also been suggested to confer a set of cognitive consequences for executive function that extend beyond language to domain general cognitive skills Many recent studies have examined aspects of how cognitive control is manifest during bilingual language processing how individual differences in cognitive resources influence second language learning and performance and the range of cognitive tasks that appear to be influenced by bilingualism However not all studies demonstrate a bilingual advantage in all tasks that tap into cognitive control Indeed many questions are unanswered that are critical to our understanding of bilingual control What aspects of cognitive control are enhanced for proficient bilinguals How are individual differences in cognitive control related to language acquisition proficiency or professional translation skill How does the language environment affect concurrent processing How exactly does language control come about in tasks such as speech production switching between languages or translation When and how does inhibitory processing support language control The focus of this Research Topic is on executive control and bilingualism The goal is to have a broad scope that includes all of these issues We seek empirical contributions using different methodologies including behavioral computational and neuroscience approaches We also welcome theoretical contributions that provide detailed discussion of models or mechanisms that account for the relationship between bilingualism and cognitive control We aim to provide a platform for new contributions that represent a state of the art overview of approaches to cognitive control

in bilingualism We hope that this Research Topic will enable the field to formulate more precise hypotheses and causal models on the relation between individual differences cognitive control and bilingual language processing
